

V5 HANK-z Outside-Option Closure
Benchmark-normalized Nz=5 figure packet

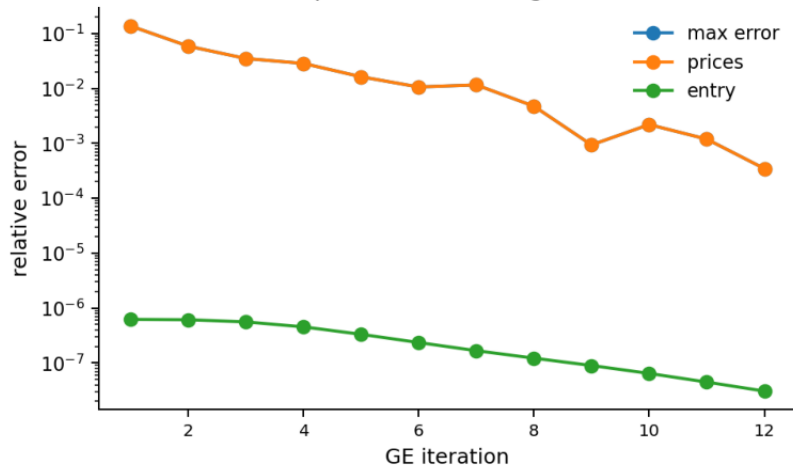

accepted: True
strict converged: True
convergence reason: strict_tol
iterations: 12
final GE error: 0.000346432
elapsed seconds: 83.10
prices: [0.511963296326644, 0.6124693819761028]
S: 1
qE: 0.9
outside probability: 0.1
M: 0.00580643
outside value: -1.50414e+06
SMM loss: 311.3
b states: 30
z states: 5

Structural state in this prototype:
(*b, d, i, a, n, s, z*)

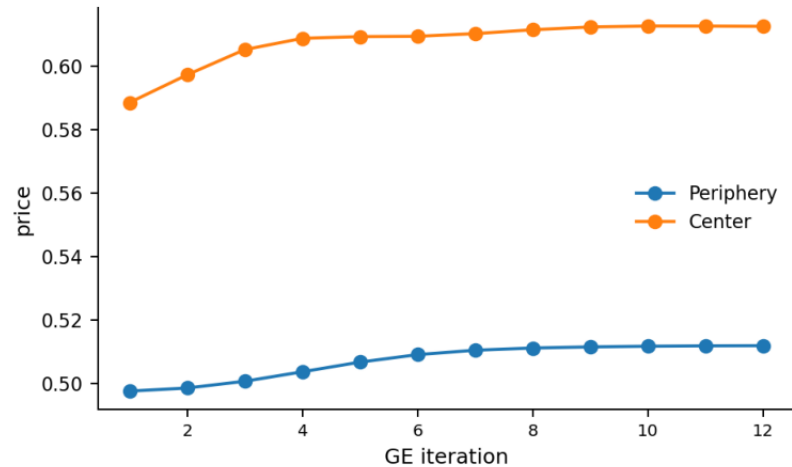

The mortgage-account state μ is not active in this packet.

01 equilibrium trace

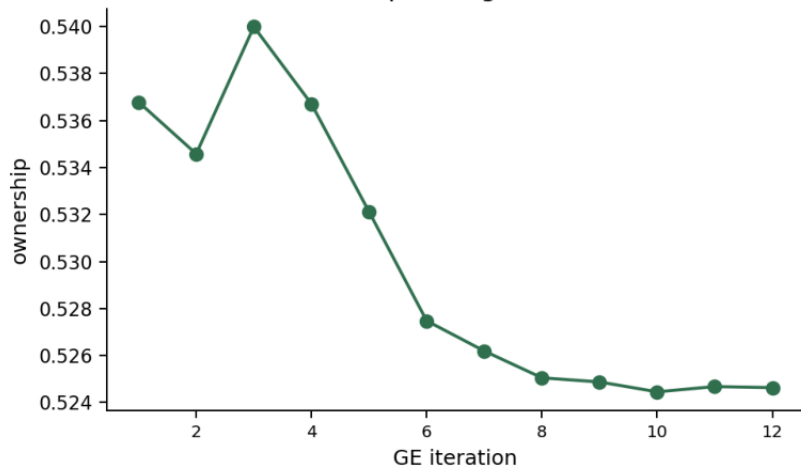

Equilibrium Convergence

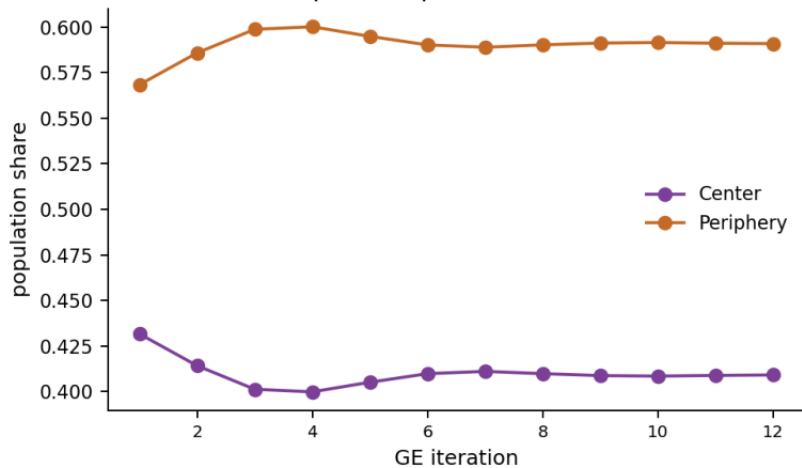

House Prices

Ownership During Fixed Point

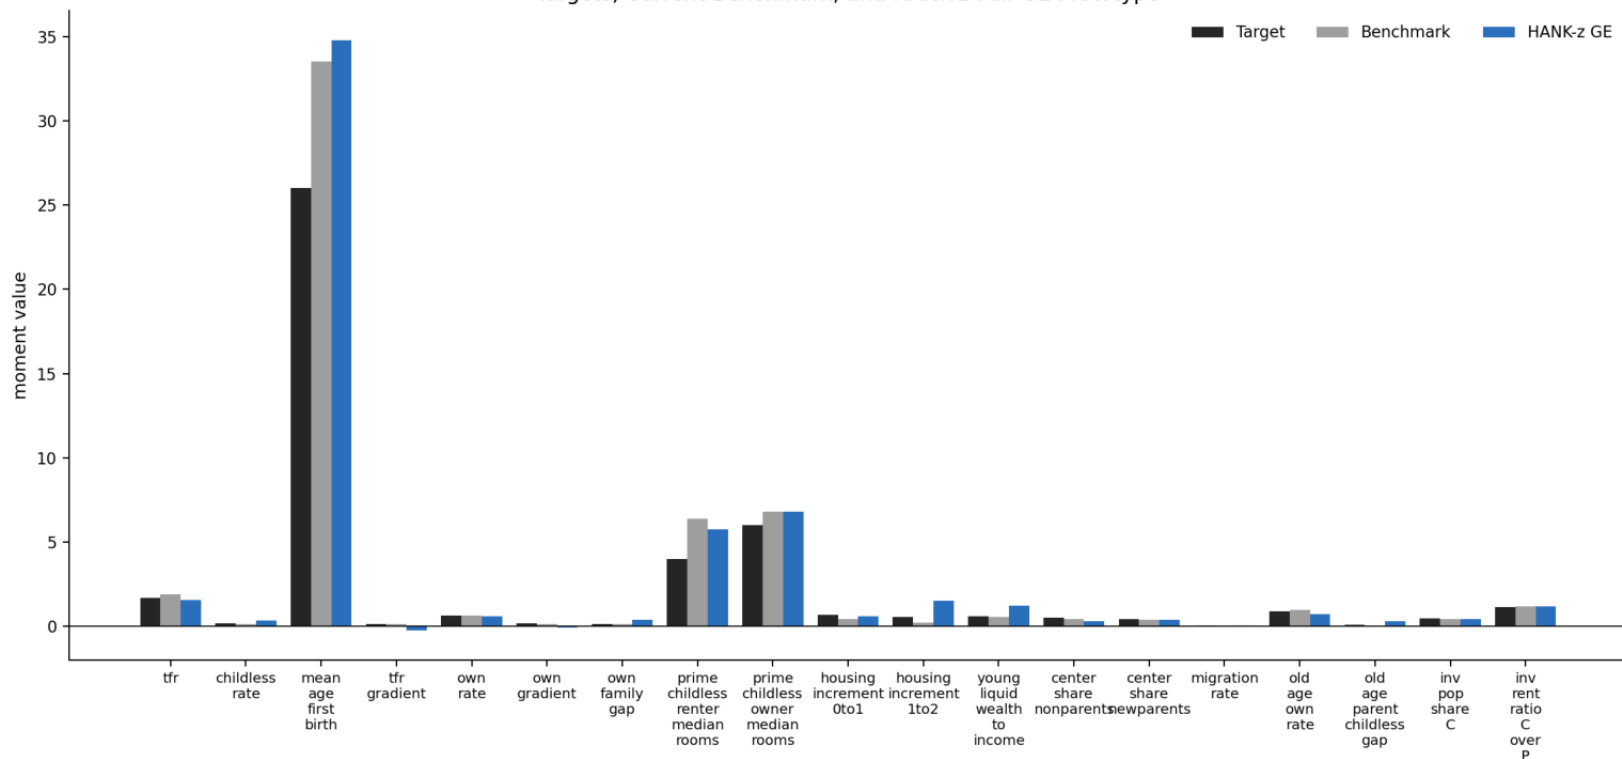

Spatial Population Shares

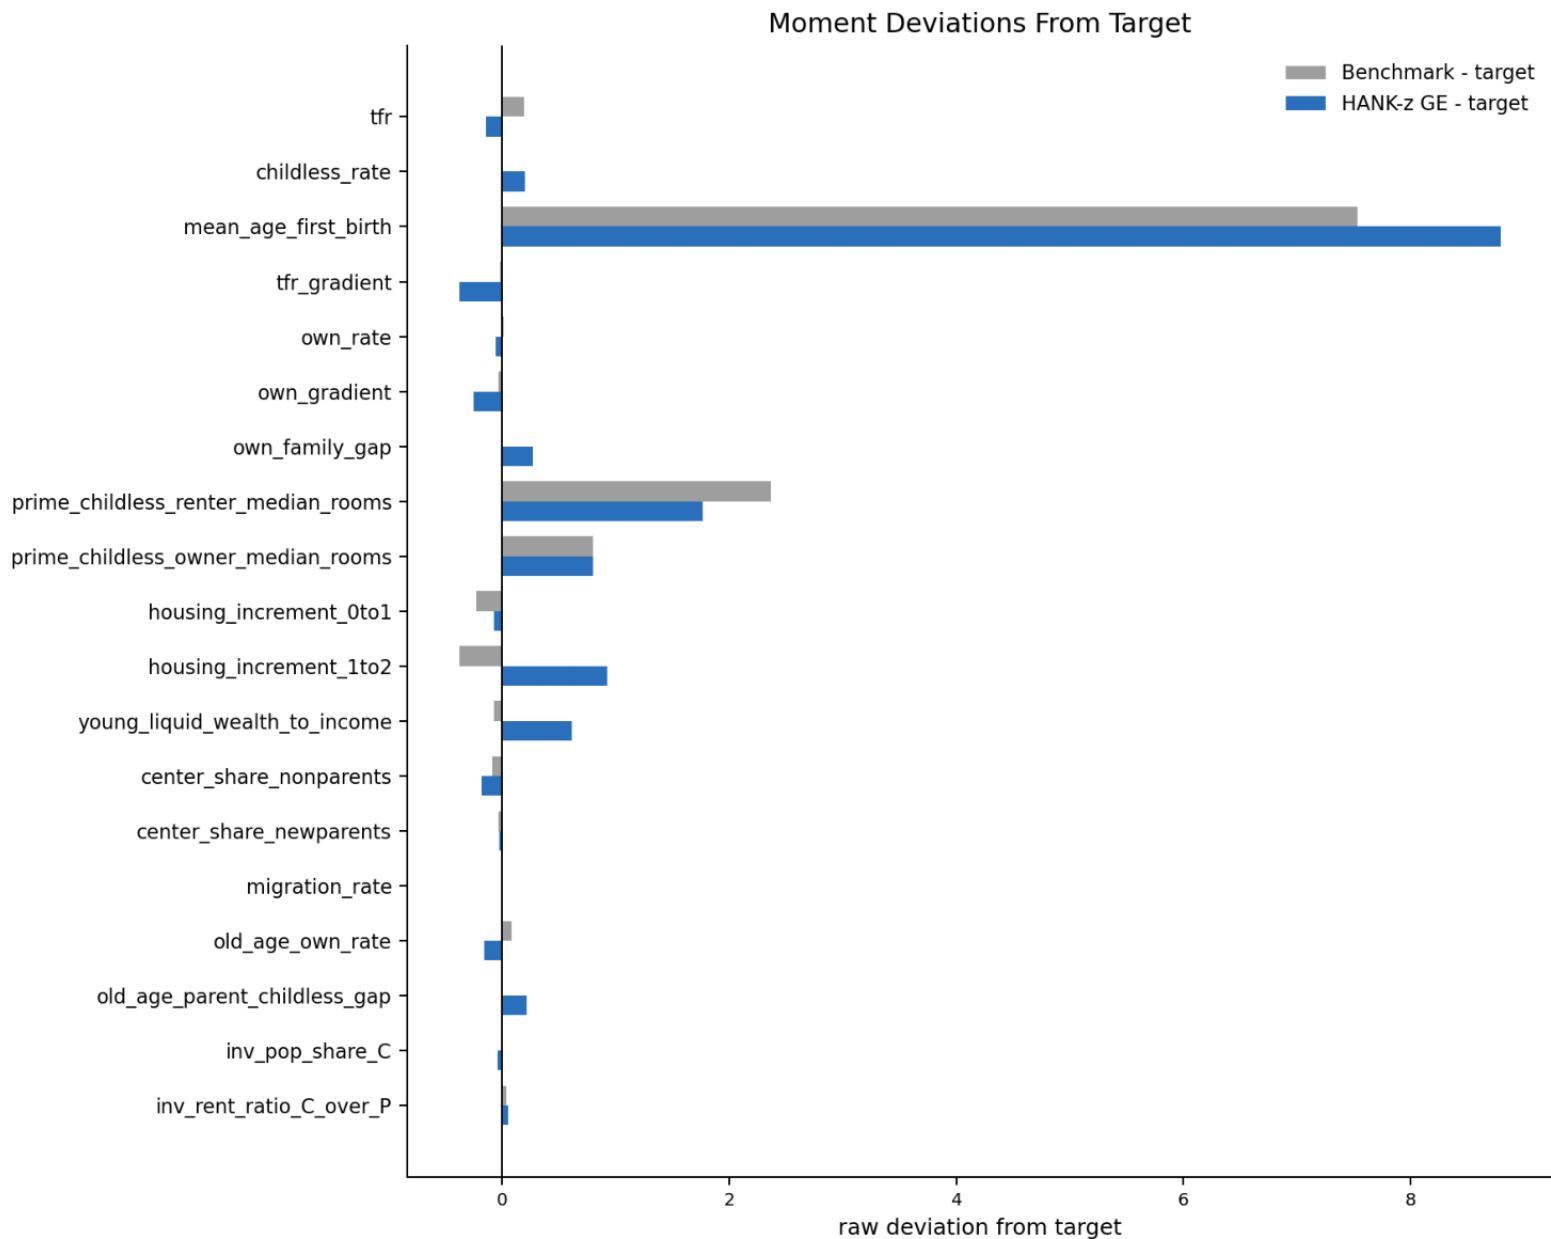

02 moment target benchmark model

Targets, Current Benchmark, and HANK-z Full-GE Prototype

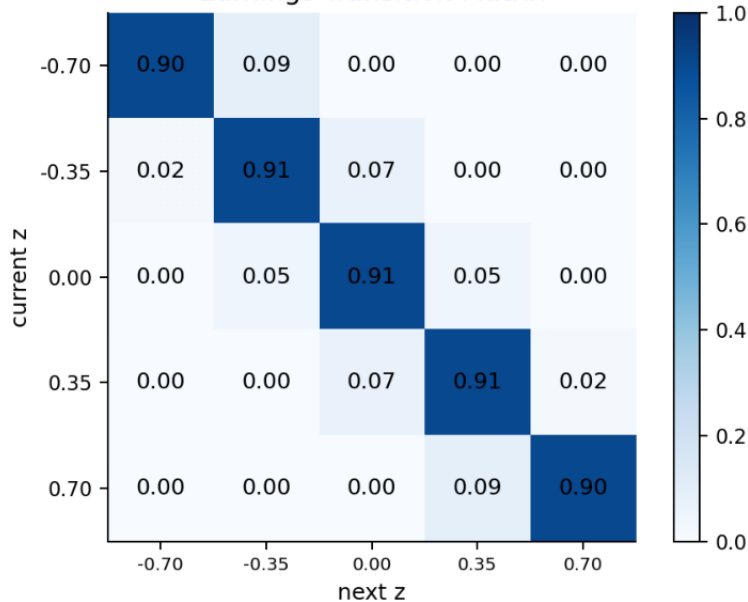

02b moment deviations from target

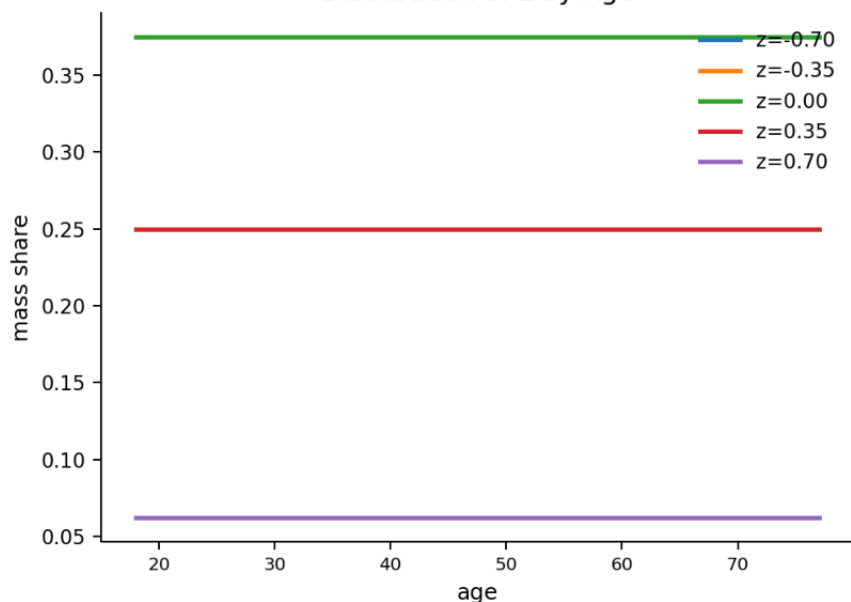

03 z process and age mass

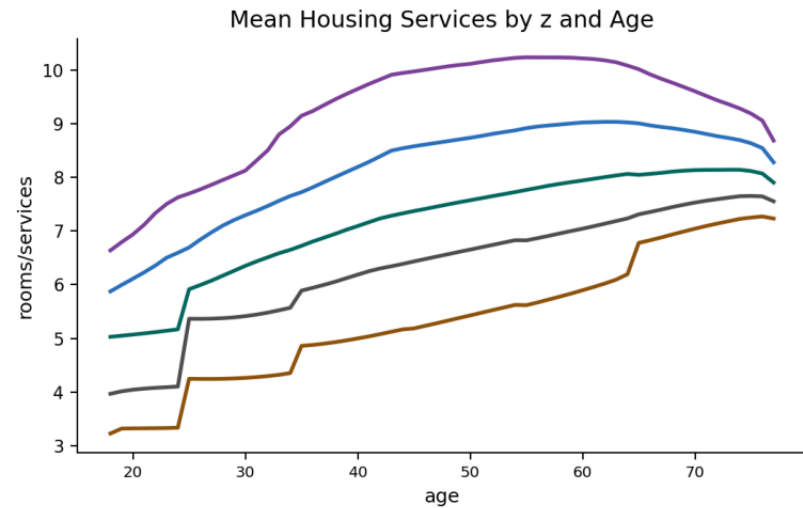

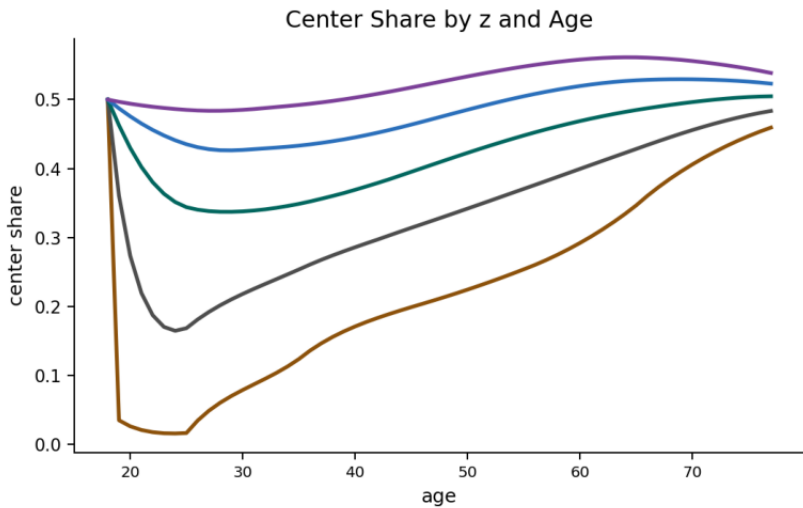

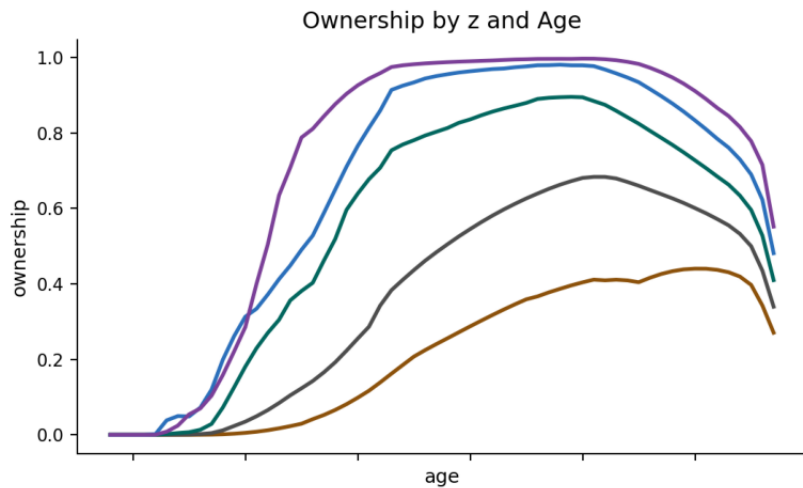

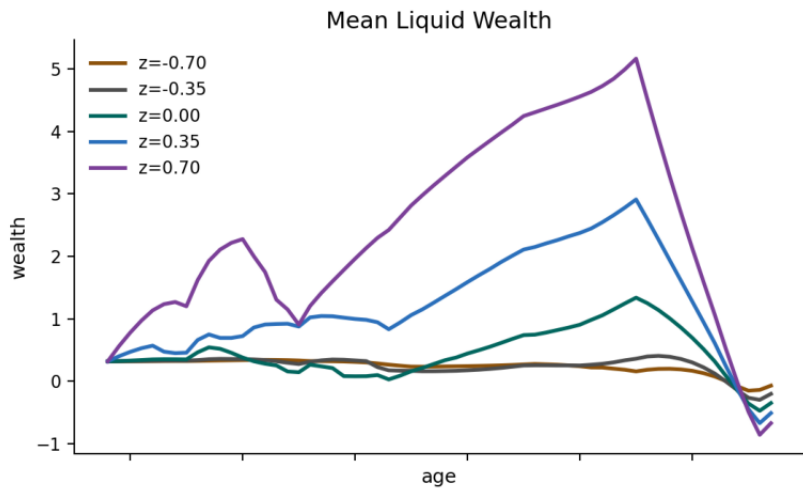

Earnings Transition Matrix

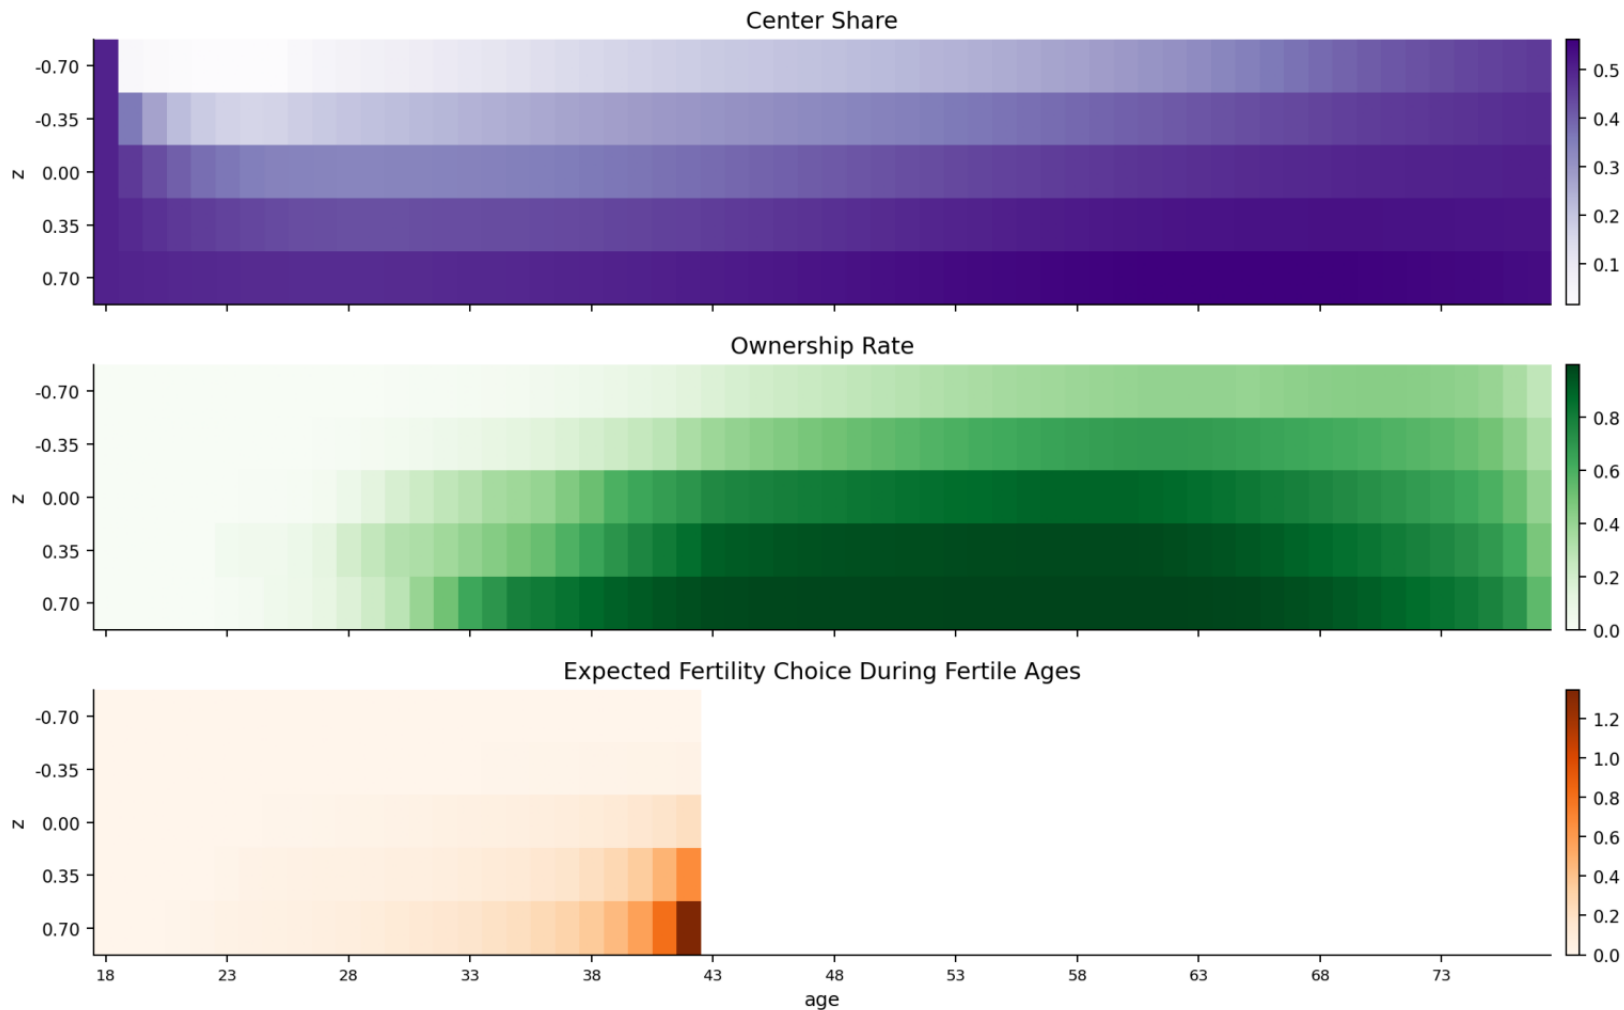

Distribution of z by Age

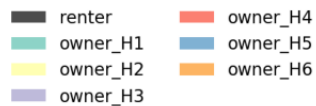

04 sorting age profiles

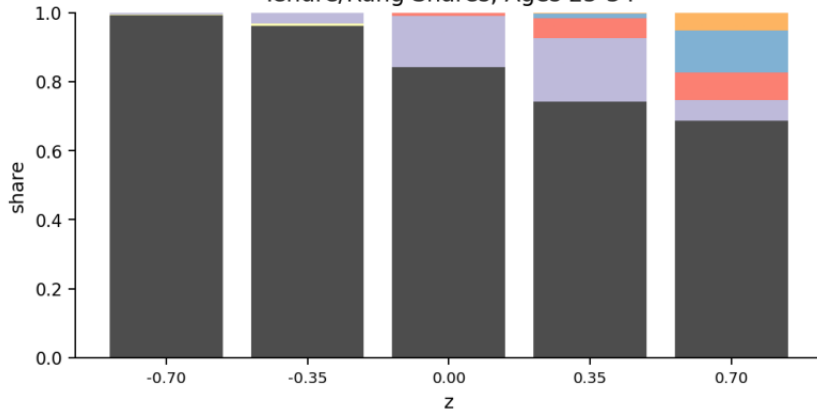

05 sorting heatmaps

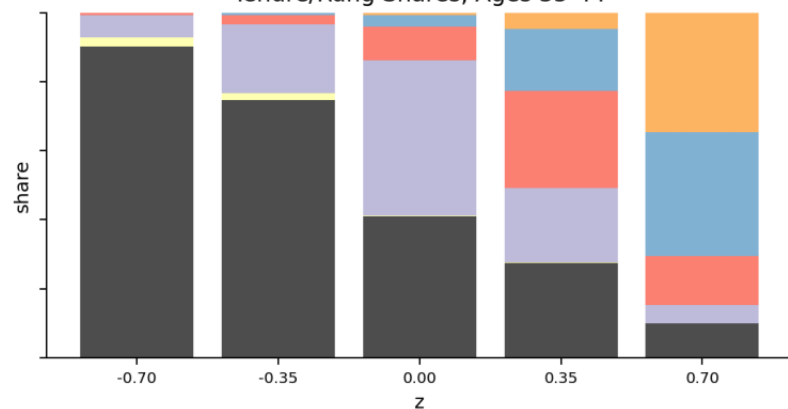

06 tenure rung sorting by z

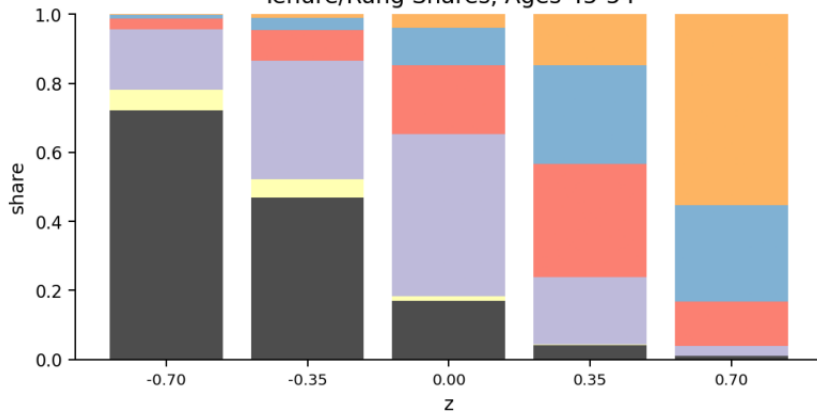

Tenure/Rung Shares, Ages 25-34

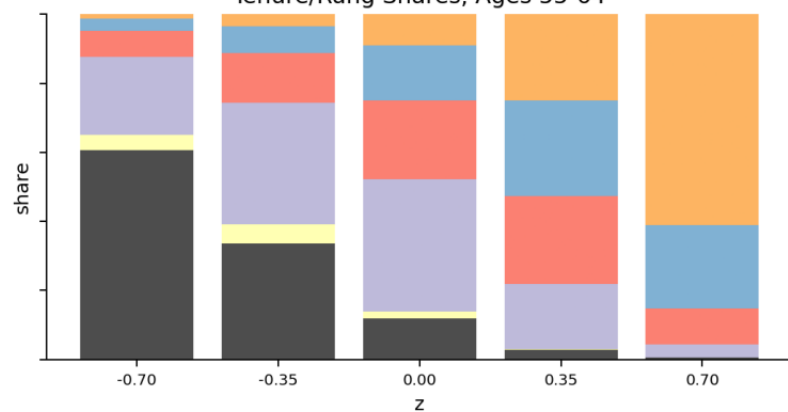

Tenure/Rung Shares, Ages 35-44

Tenure/Rung Shares, Ages 45-54

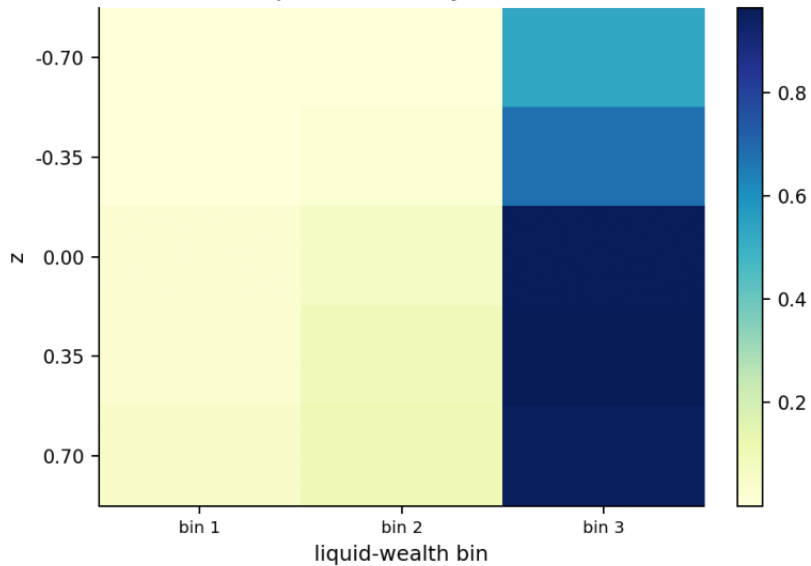

Tenure/Rung Shares, Ages 55-64

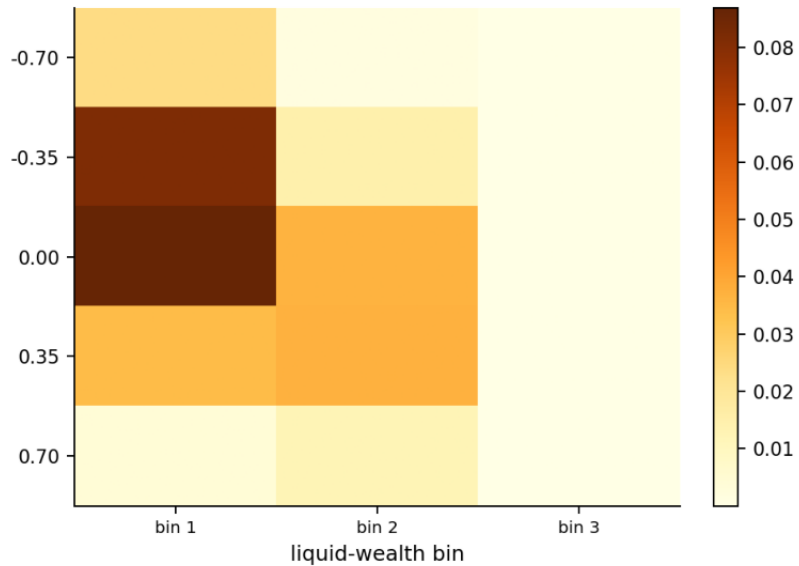

07 fertility by z and wealth

Expected Fertility Choice

Fertile Childless Mass

08 aggregate sorting by z
