

Completed fertility if 2023 birth rates persisted

Illustrative calculation from NCHS annual age-specific birth rates, 1990-2023 (Driscoll and Hamilton, 2025, Tables 2 and 4). Historical rates through 2023; each age-specific rate held at its 2023 level thereafter. Five-year age groups; approximate completion at 50. This projects cohort fertility from birth rates; it is a different measure from the CPS ages 40-44 survey series in the presentation.
