

Fertility and housing: historical comparison and continuation

Sources: Census CPS Historical Table 2; national ACS; saved model path. Housing caps each household at nine rooms; both stock indices start at 100. Completed fertility uses ages 40-44; CPS 2022/2024 counts are capped at five. Period fertility is dated at the start of its four-year birth window. Continuation holds preferences fixed. Historical population is conditioned on demographic data. No property-tax rebate; horizon sensitivity remains unresolved.
