

Earnings and entry wealth: decision review

September 22, 2026 | Prepared for the 21:00 EDT discussion

Brief summary

Experimental comparison against this morning's V5 diagnostic: A/B use one persistent earnings shock; C/D retain persistent plus iid risk, with their corresponding stationary entrant-income distributions. A/C enter with zero assets; B/D use the inherited heterogeneous wealth marginal. All keep the age profile, timing, current-income purchase eligibility, housing-floor/equivalence-scale forms, transfer rules, targets and weights. Income resolution changes; the wealth grid is unchanged. Searches vary nine parameters and re-normalize the fertility utility scale. None is paper adoption.

All 163 attempted coarse-grid objectives passed; 81 planned proposals were unrun within the fixed budgets. The persistent-only process also passed at 15 states with both entry-wealth assumptions. Zero entry wealth is therefore not necessary to make that specification solve.

The best observed persistent-only, heterogeneous-wealth point still predicts 45.3% ownership versus 64.8%, 6.25 rooms versus 5.56, and a 1.34-room first-birth response versus 0.72. The same main housing misses appear across the four specifications.

Seven states are not yet an adequate numerical certificate: moving to 15 delays mean first birth by 0.52-0.55 years at common search parameters. At 45 states, the zero-wealth two-component case timed out; the heterogeneous-wealth case failed the unchanged feasibility gate at a tiny population mass.

Collection status

Available cells: A/selected, A/smoke, B/selected, B/smoke, C/selected, C/smoke, D/selected, D/smoke. Explicitly unavailable or missing: none. No numeric value is inferred for an unavailable cell.

Cell	Scored	Failed/unscored	Running/incomplete	Unstarted
A	61	0	0	0
B	61	0	0	0
C	22	0	0	39
D	19	0	0	42

Recommendations

Use one persistent earnings process plus the age profile as the working baseline direction. Retain heterogeneous entry wealth, after harmonizing its income definition. Verify the selected point at richer resolution and assess continuation feasibility; then settle the housing-floor versus child-share specification before a long calibration.

Limitations

The inherited wealth proxy mixes family-income and model earnings denominators and uses a diagnostic rank coupling. Four-year income is known at the decision; entry income risk is stationary at age 18. Grid robustness and exact selected-point repetitions remain unproved. The parenthood housing floor is at its 2.3 upper bound in all selected points. Lower weighted loss is not an adopted fit. Some original appendix legends overlap or clip; their source images are preserved and flagged.

Selected points: targets and model moments

A/B use one persistent earnings shock; C/D add iid earnings risk. A/C enter with zero assets; B/D use the inherited wealth marginal. Each column is its best verified observed point, including smoke. Search coverage can differ; this is not a comparison of converged calibrations.

Moment	Target	A	B	C	D
Initial fertility normalization	2.1	2.1	2.1	2.1	2.1
Childless women, ages 40-44	0.19828	0.16561	0.1689	0.16993	0.17346

First-birth room response, -1 to +3	0.72025	1.3463	1.3415	1.3422	1.3398
Rooms: 3+ versus 1-2 resident children (model dependent proxy)	0.34707	0.3051	0.30565	0.30783	0.30945
Recent-parent ownership gap	0.1629	0.11513	0.11784	0.12355	0.12579

Full gaps, weights, loss contributions, all 17 parameter restrictions and original figures follow in the appendix. The next page holds the nine search parameters fixed across the four specifications.

Common parameters: smoke comparison

Each available smoke holds the nine search parameters fixed. Equilibrium and the fertility utility scale are resolved separately to match the same normalization target in each specification. Missing cells have no verified scored result.

Income-grid sensitivity at common parameters

Entries are finer-grid minus coarse-grid model moments, in each moment's original units. A/B compare 15 versus 7 income states; C/D compare 45 versus 21. Preferences, targets and the wealth grid are held fixed; equilibrium and the existing fertility normalization are resolved.

Mean occupied rooms, capped at 9	5.5611	6.2295	0.66841	128.02	57.197
Ownership, heads 30-55	0.64833	0.45265	-0.19568	2,339.36	89.578
First-birth room response, -1 to +3	0.72025	1.3398	0.61955	137.57	52.804
Rooms: 3+ versus 1-2 resident children (model dependent proxy)	0.34707	0.30945	-0.037617	280.53	0.39695
Recent-parent ownership gap	0.1629	0.12579	-0.037104	27,055.82	37.249

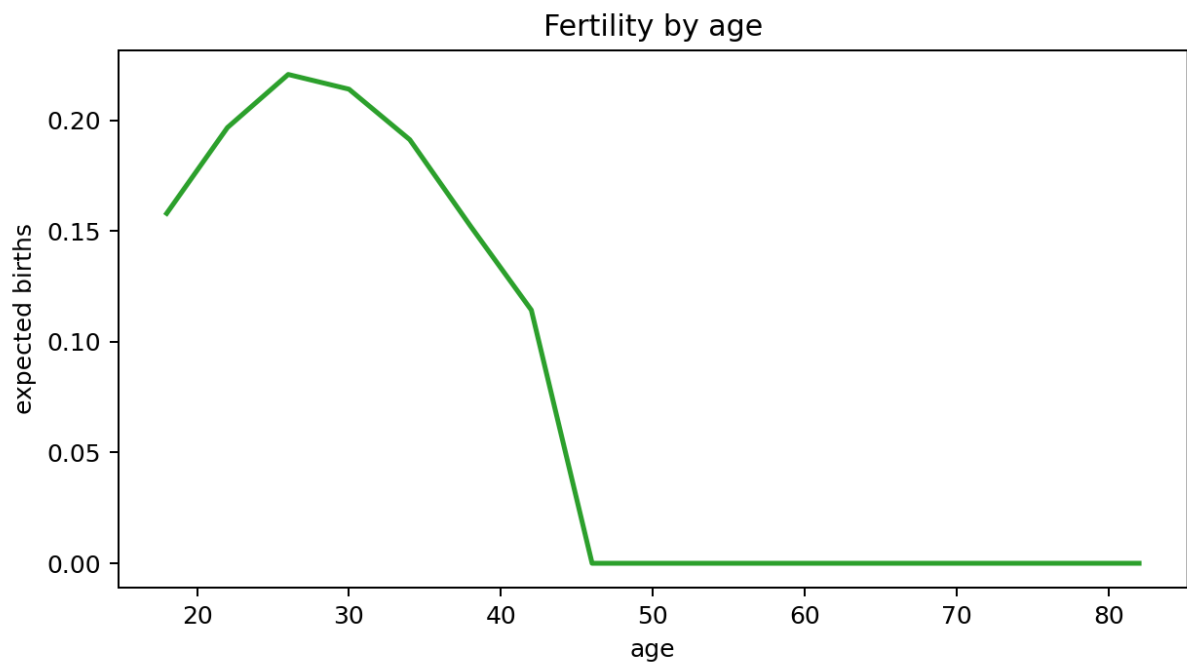

All 17 parameters

Near bound means within 1% of the raw bound width; wide log-search bounds can flag small positive scales. This is not evidence of identification or convergence.

Parameter	Estimate	Actual lower	Actual upper	Near bound	Restriction/status
beta_annual	0.98614	0.94	0.99	False	search coordinate
kappa_fert	0.29331	0.02	50	True	search coordinate
kappa_fert_continuation	0.45387	0.02	50	True	search coordinate
chi	1.0094	0.1	5	False	search coordinate
H0	7.5796	0.2	80	False	search coordinate
theta0	0.040247	0	8	True	search coordinate
theta1	0.092348	0.02	16	True	search coordinate
first_birth_fixed_cost	0.31519	0	8	False	search coordinate
h_P	2.3	0.1	2.3	True	search coordinate
hbar_child_rooms	0	-	-		zero restriction
psi_child	0.17363	-	-		normalized to 2.1
payroll_tax	0.179	-	-		externally fixed
pension_period	2.0464	-	-		budget derived
housing_supply_elasticity	0.63	-	-		externally fixed
tenure_choice_kappa	0.005	-	-		externally fixed
alpha_cons	0.733	-	-		externally fixed
sigma	2	-	-		externally fixed

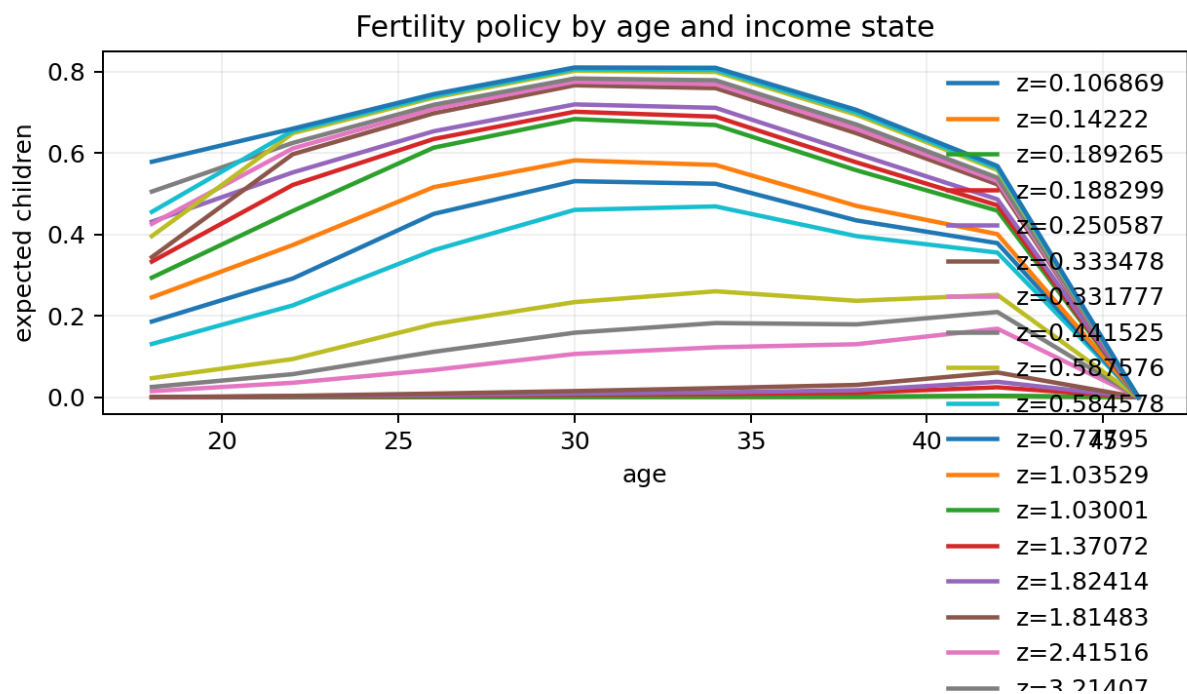

Appendix: D / selected original standard diagnostics (1-2 of 17)

fertility by age

Original diagnostic image retained without substitution or redesign.

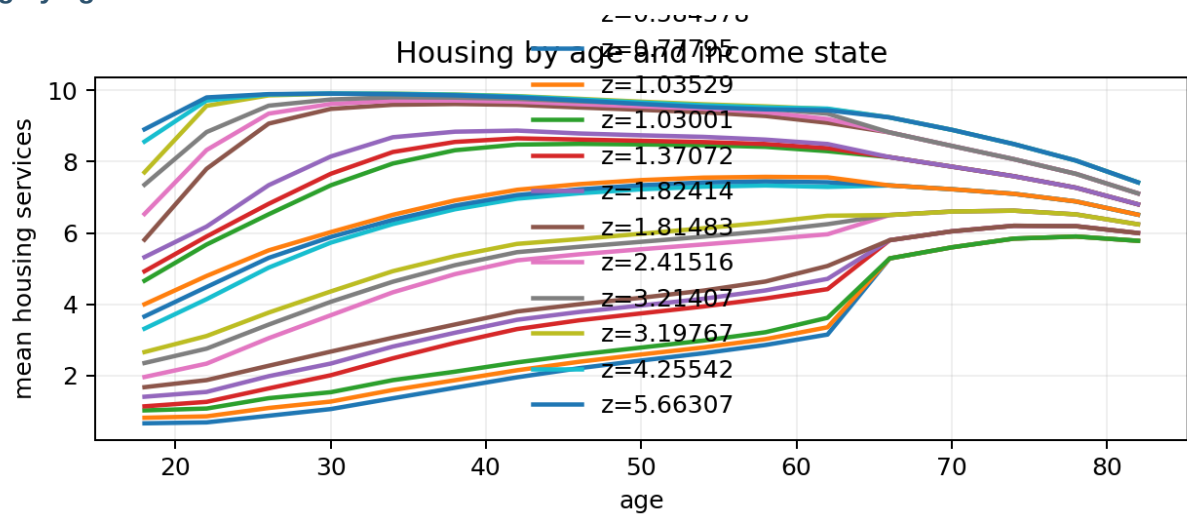

fertility policy by age income state

Original diagnostic image retained without substitution or redesign.

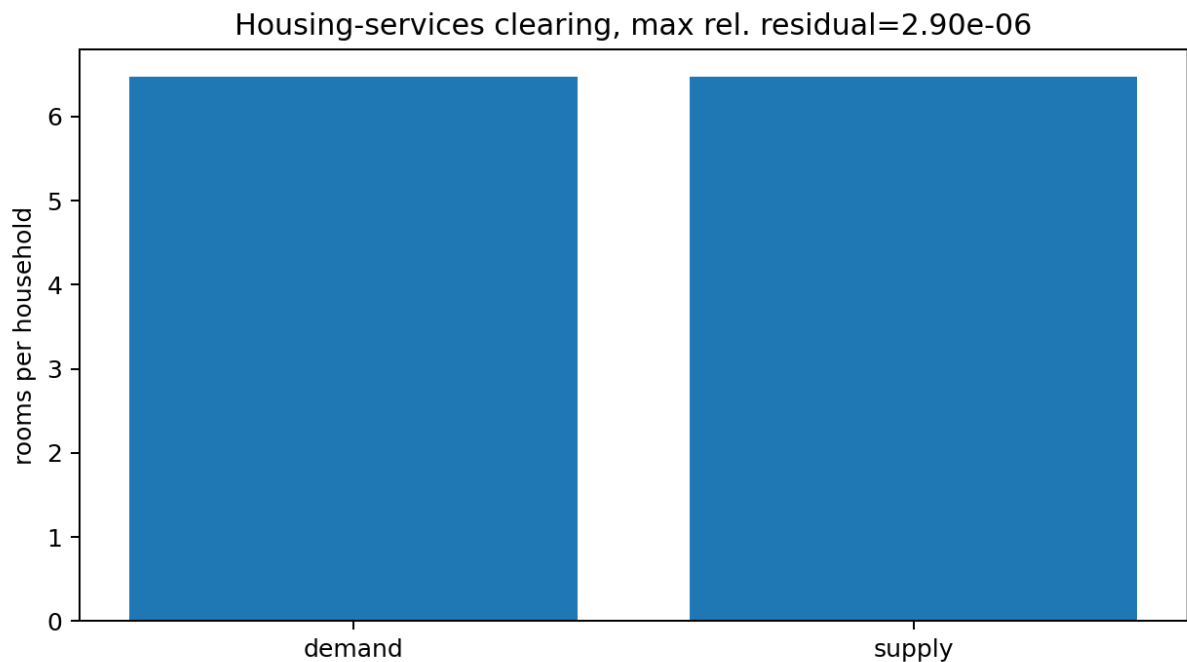

Appendix: D / selected original standard diagnostics (3-4 of 17)

housing by age income state

Original source legend is crowded or clipped; image retained unchanged.

housing market

Original diagnostic image retained without substitution or redesign.

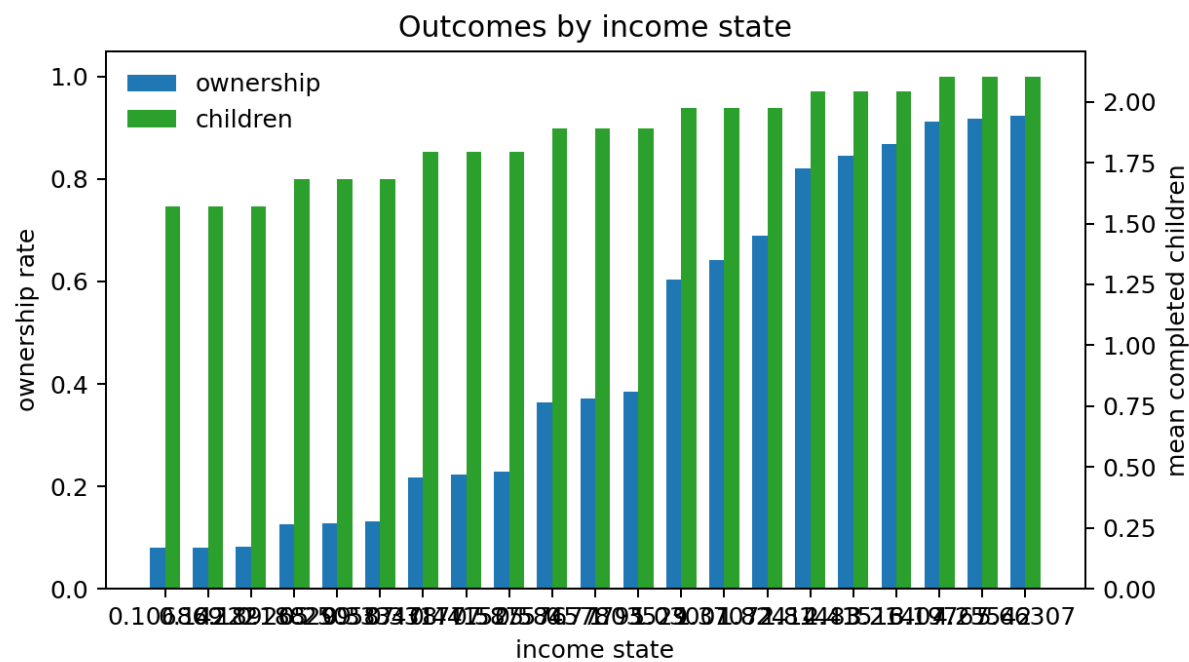

Appendix: D / selected original standard diagnostics (5-6 of 17)

housing prices

Original diagnostic image retained without substitution or redesign.

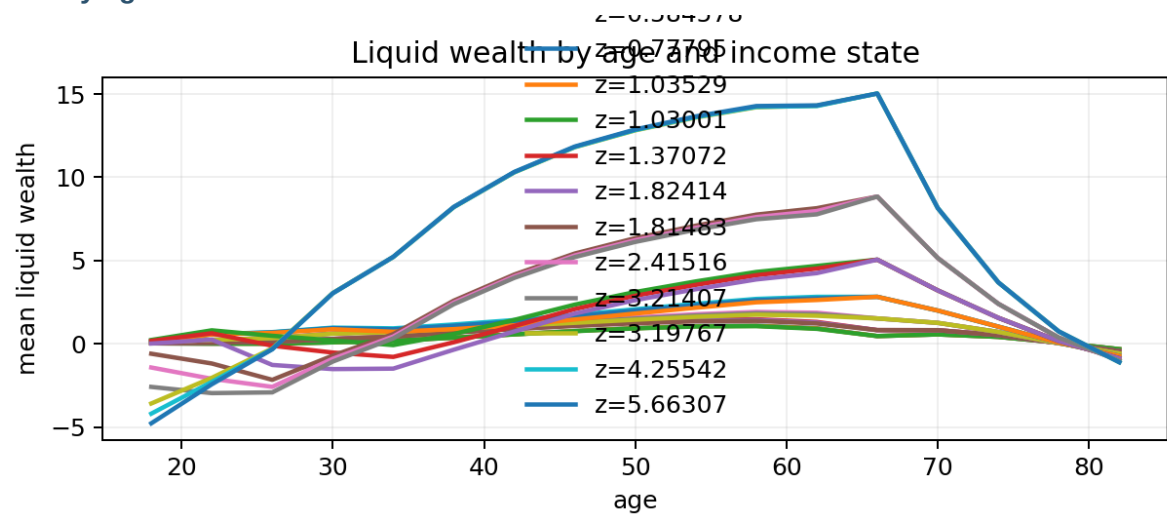

income state outcomes

Original diagnostic image retained without substitution or redesign.

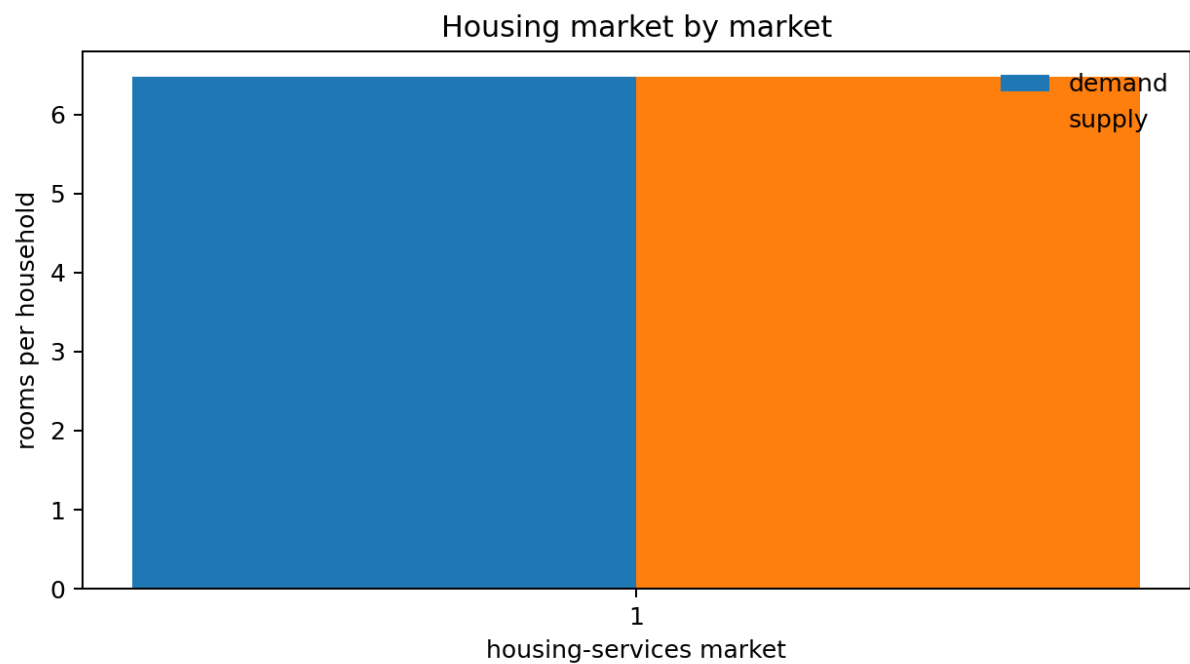

Appendix: D / selected original standard diagnostics (7-8 of 17)

liquid wealth by age income state

Original diagnostic image retained without substitution or redesign.

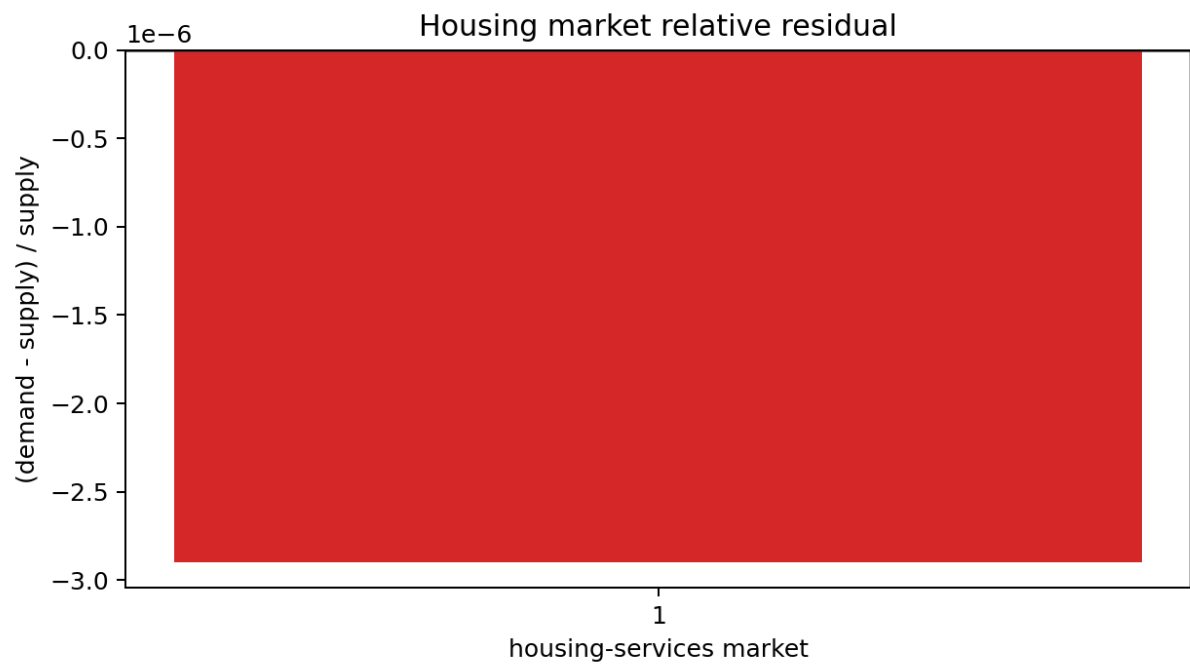

market clearing by market

Original diagnostic image retained without substitution or redesign.

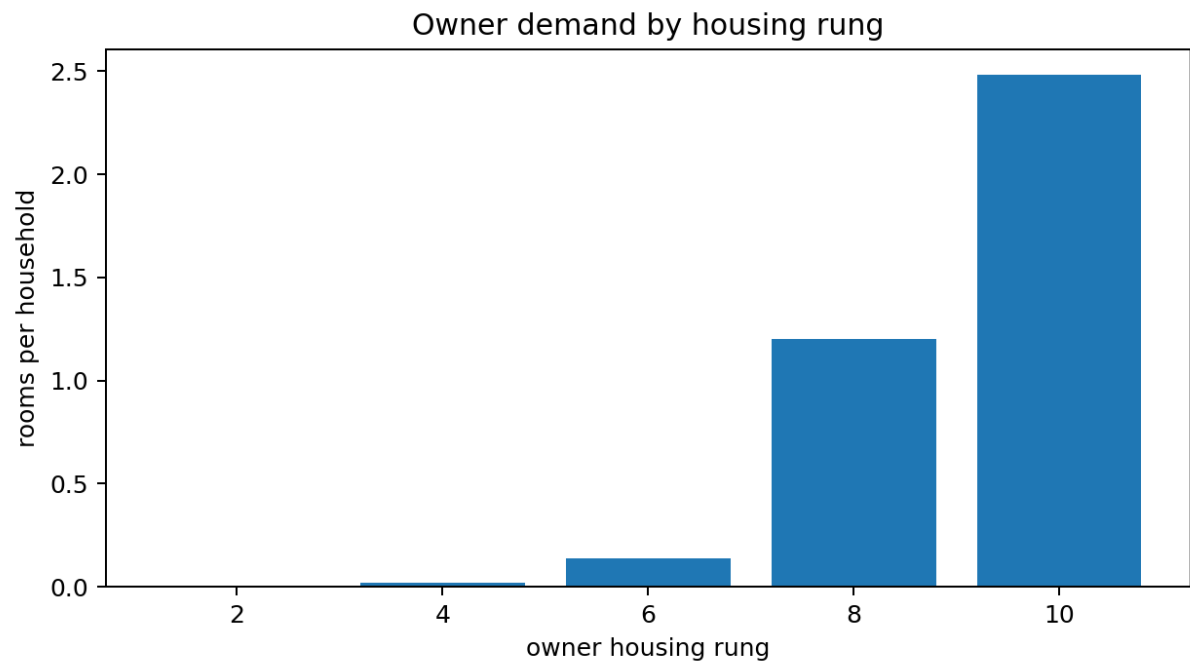

Appendix: D / selected original standard diagnostics (9-10 of 17)

market clearing residuals

Original diagnostic image retained without substitution or redesign.

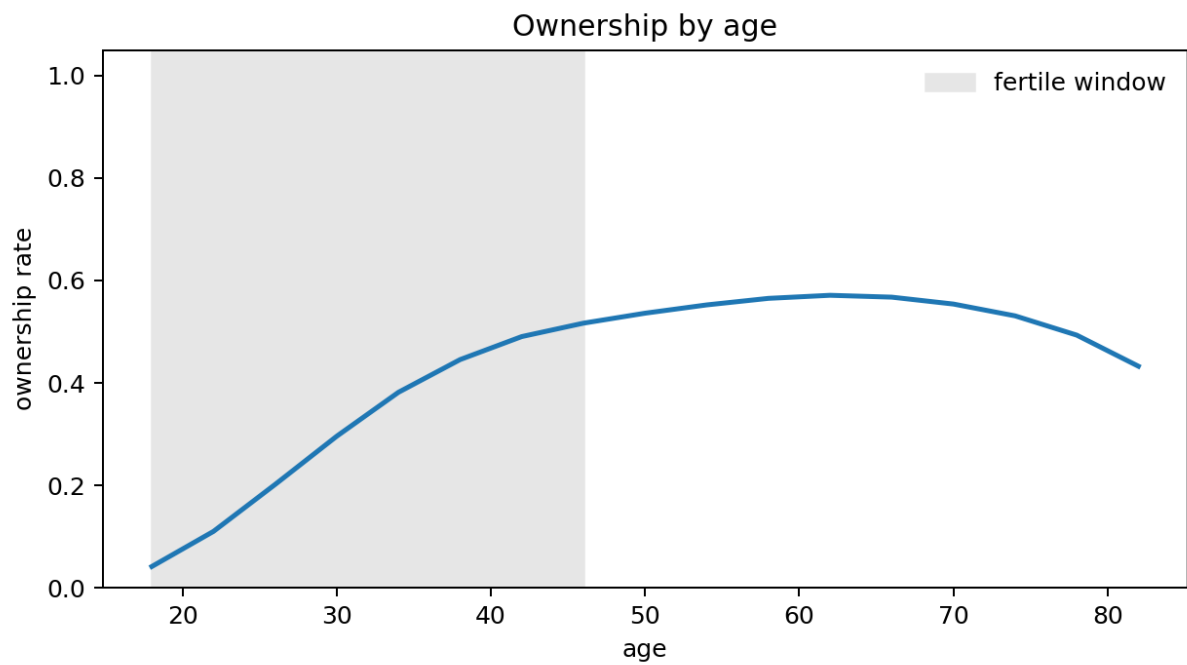

owner rungs

Original diagnostic image retained without substitution or redesign.

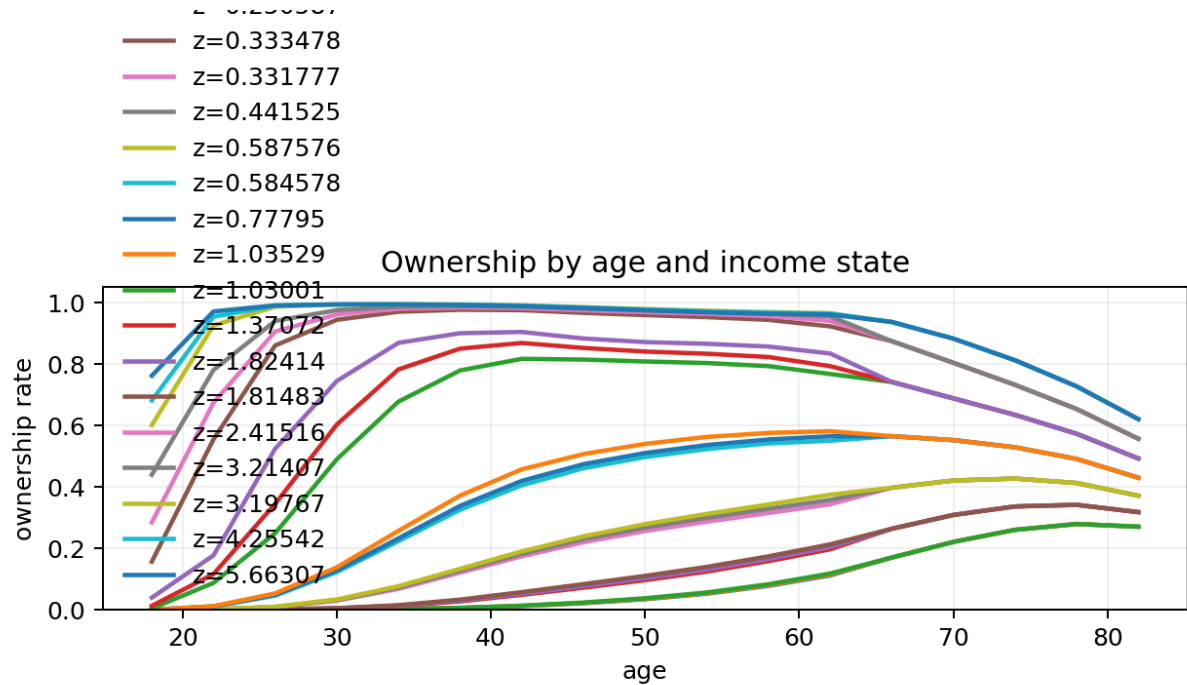

Appendix: D / selected original standard diagnostics (11-12 of 17)

ownership by age

Original diagnostic image retained without substitution or redesign.

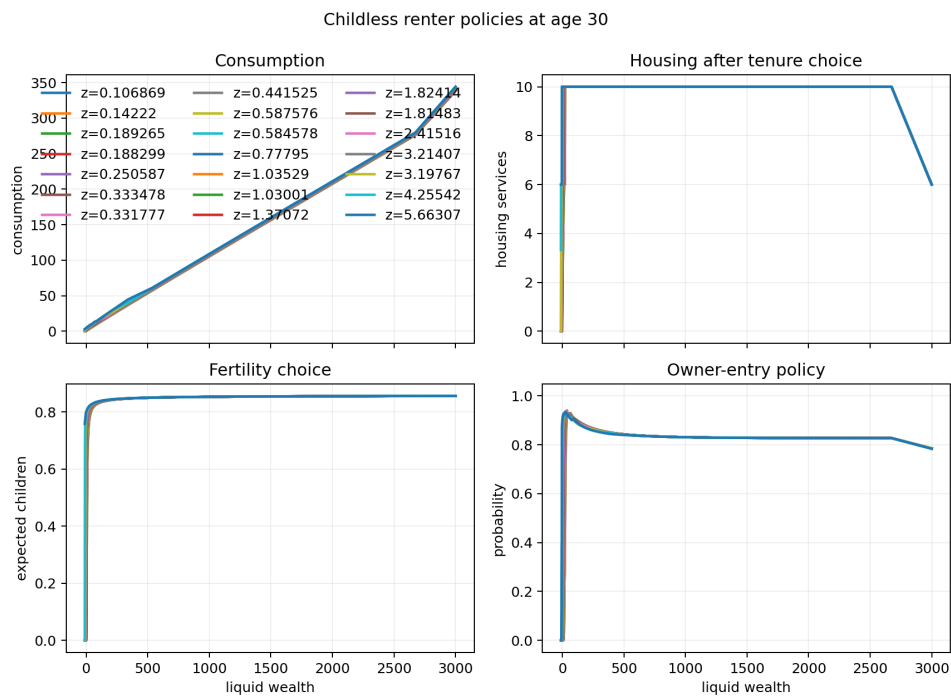

ownership by age income state

Original source legend is crowded or clipped; image retained unchanged.

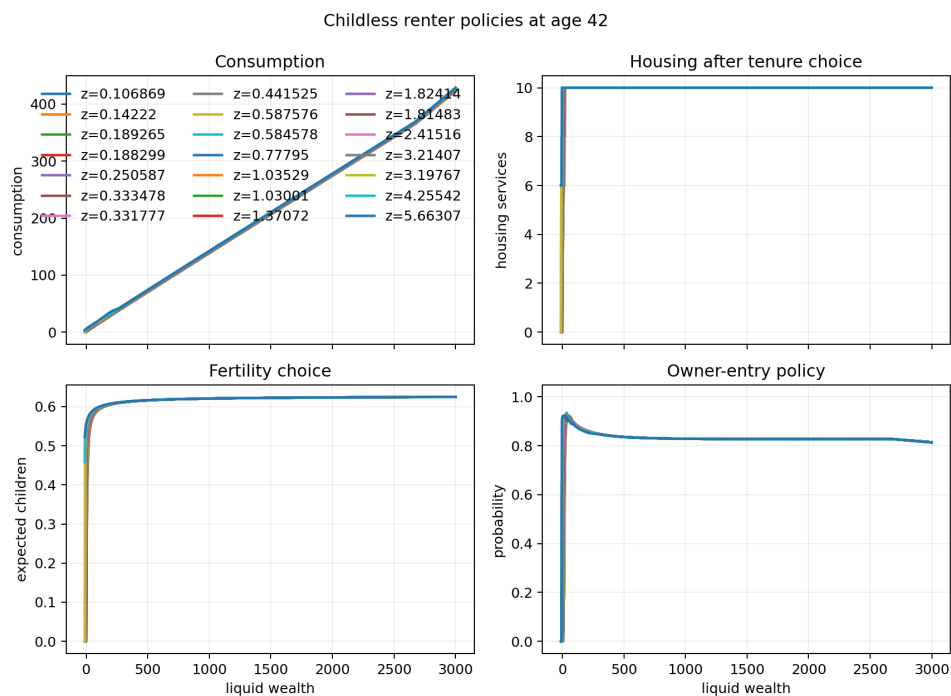

Appendix: D / selected original standard diagnostics (13-14 of 17)

policy childless renter age30

Original diagnostic image retained without substitution or redesign.

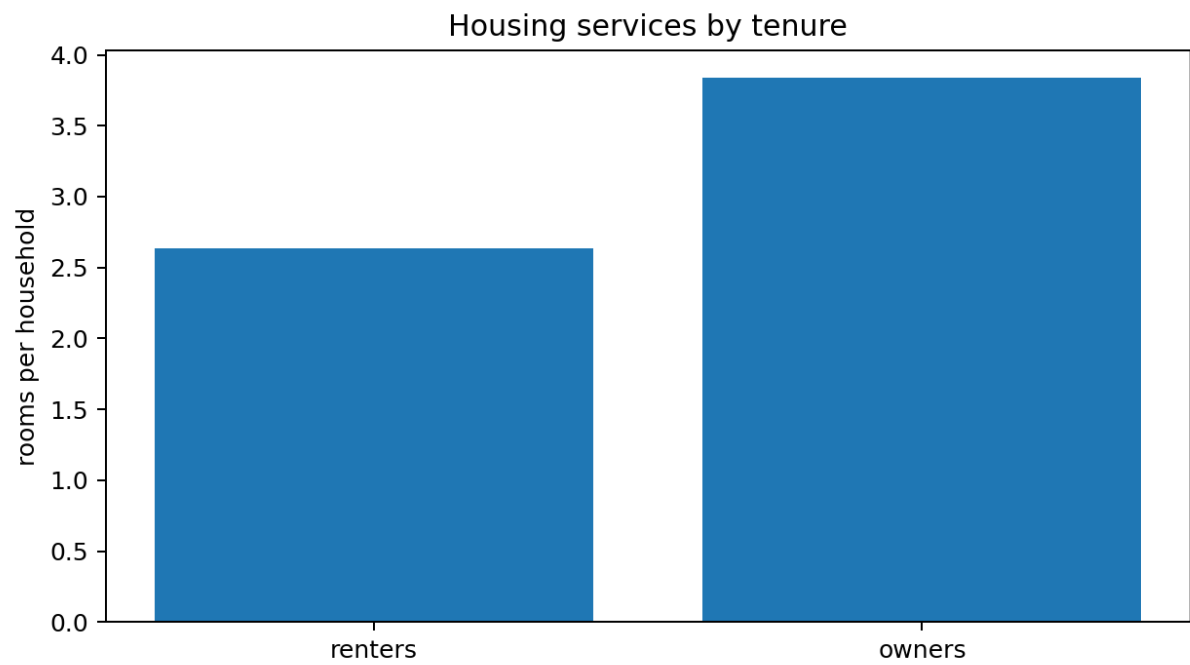

policy childless renter age42

Original diagnostic image retained without substitution or redesign.

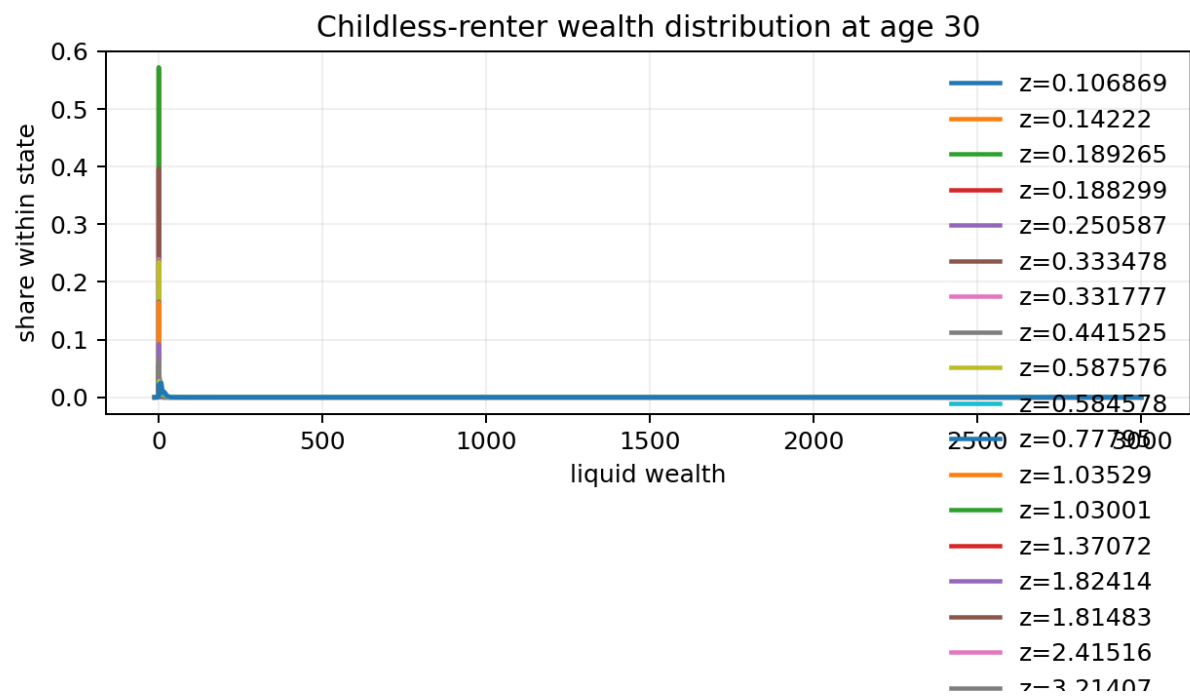

Appendix: D / selected original standard diagnostics (15-16 of 17)

tenure services

Original diagnostic image retained without substitution or redesign.

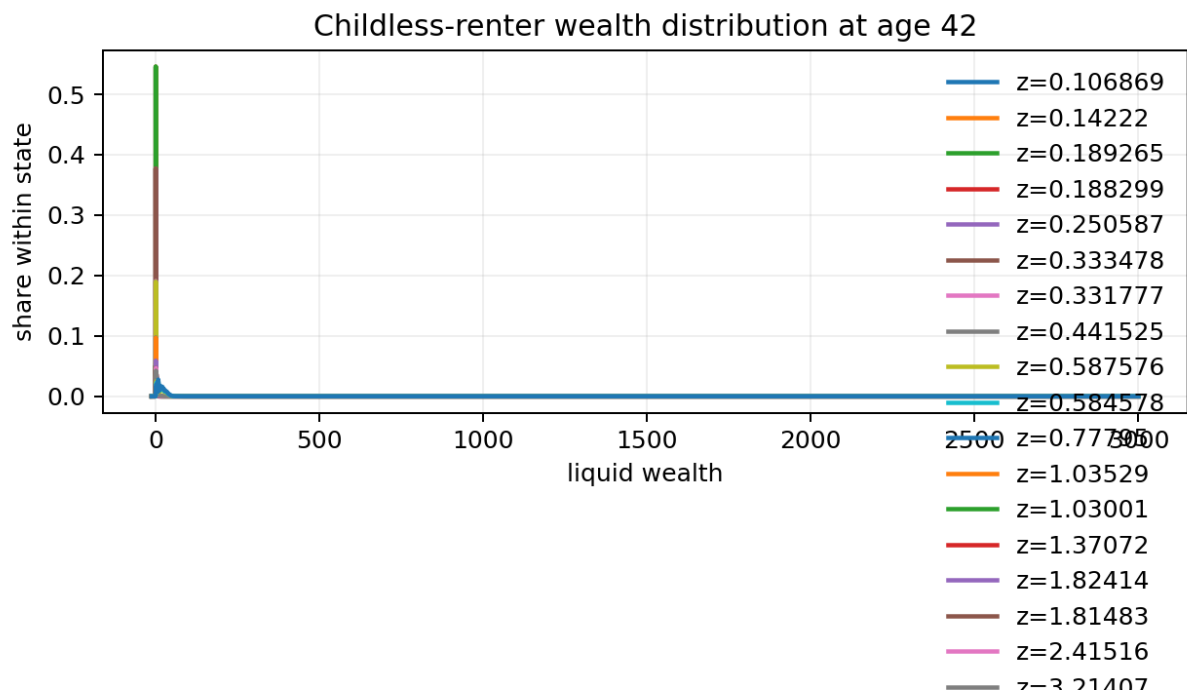

wealth dist childless renter age30

Original source legend is crowded or clipped; image retained unchanged.

Appendix: D / selected original standard diagnostics (17-17 of 17)

wealth dist childless renter age42

Original source legend is crowded or clipped; image retained unchanged.
