

Paired overnight calibration - oasi_087510

PAYGO payroll tax: 0.0875101742496; pension balances endogenously.

Selected weighted loss: 280.411; 12 scored moments, 8 free coordinates, psi normalized to 2.1.

Both tax arms use identical targets, bounds, source, common seeds, and proposal bank.

This is a recalibrated-arm comparison, not a fixed-parameter causal tax effect.

First-birth rooms target: exact 1.465; model observer is an unmatched stationary proxy.

SCF bequest target is child-directed; model observer sums gross positive estates.

Adult entry: split 16/20 birth-vintage queue, once divided by 2.1; closed renewal gate passed.

Exact repeats verified: 2/2; missing or failed: [].

Available-repeat max table-cell gap 0.000e+00, loss gap 0.000e+00.
