

1. Transition and pension accounts

Six dates, 2007-2027; new utility; illustrative shock; terminal horizon remains unchecked.

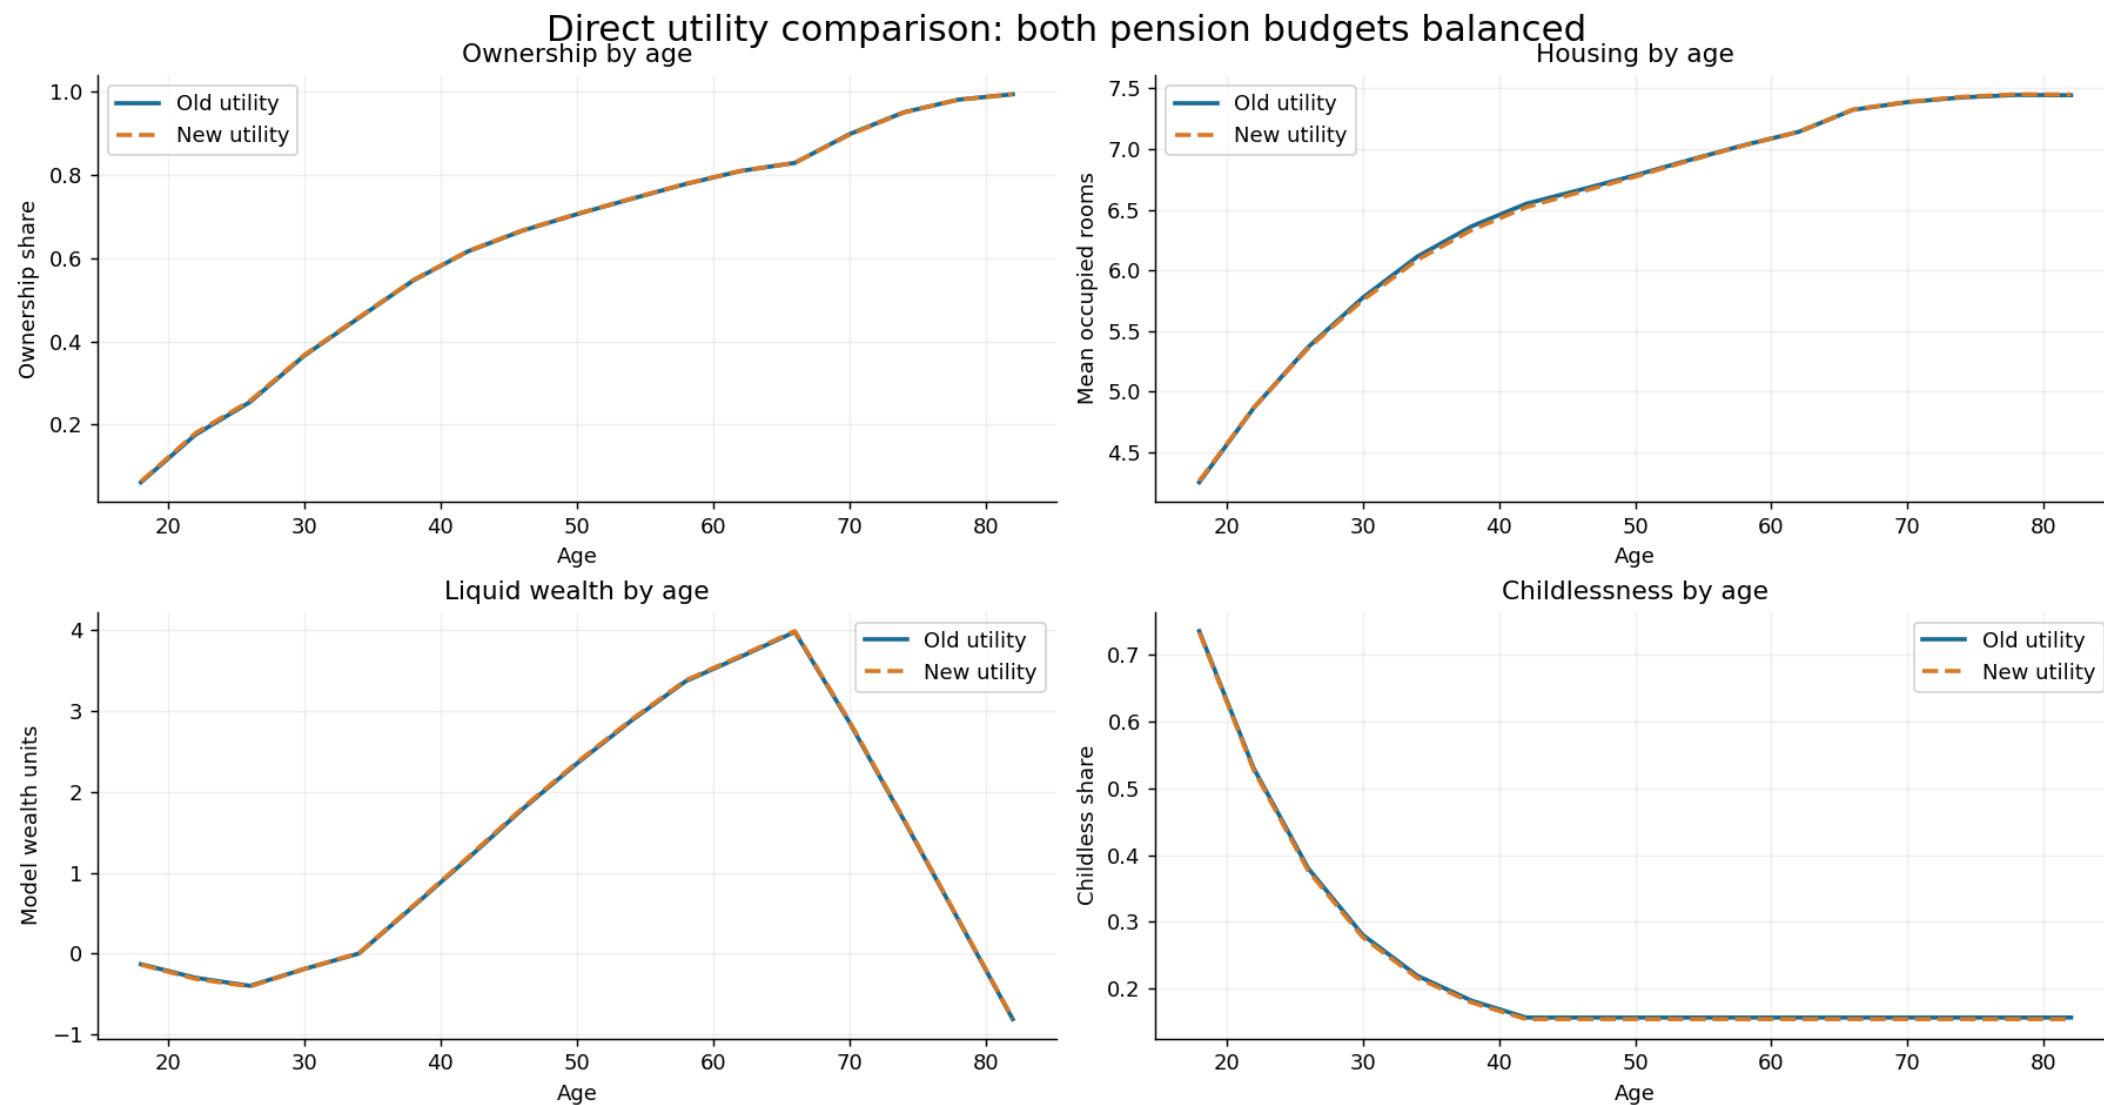

Illustrative announced preference shock; no fitted historical path or horizon certification.

These are model outcomes, not policy effects or population forecasts. Benefits and quantities use four-year model periods.

2. Direct effect of the utility change

Pre-2007 stationary diagnostics; same parameters and preference; balanced pensions in both cases.

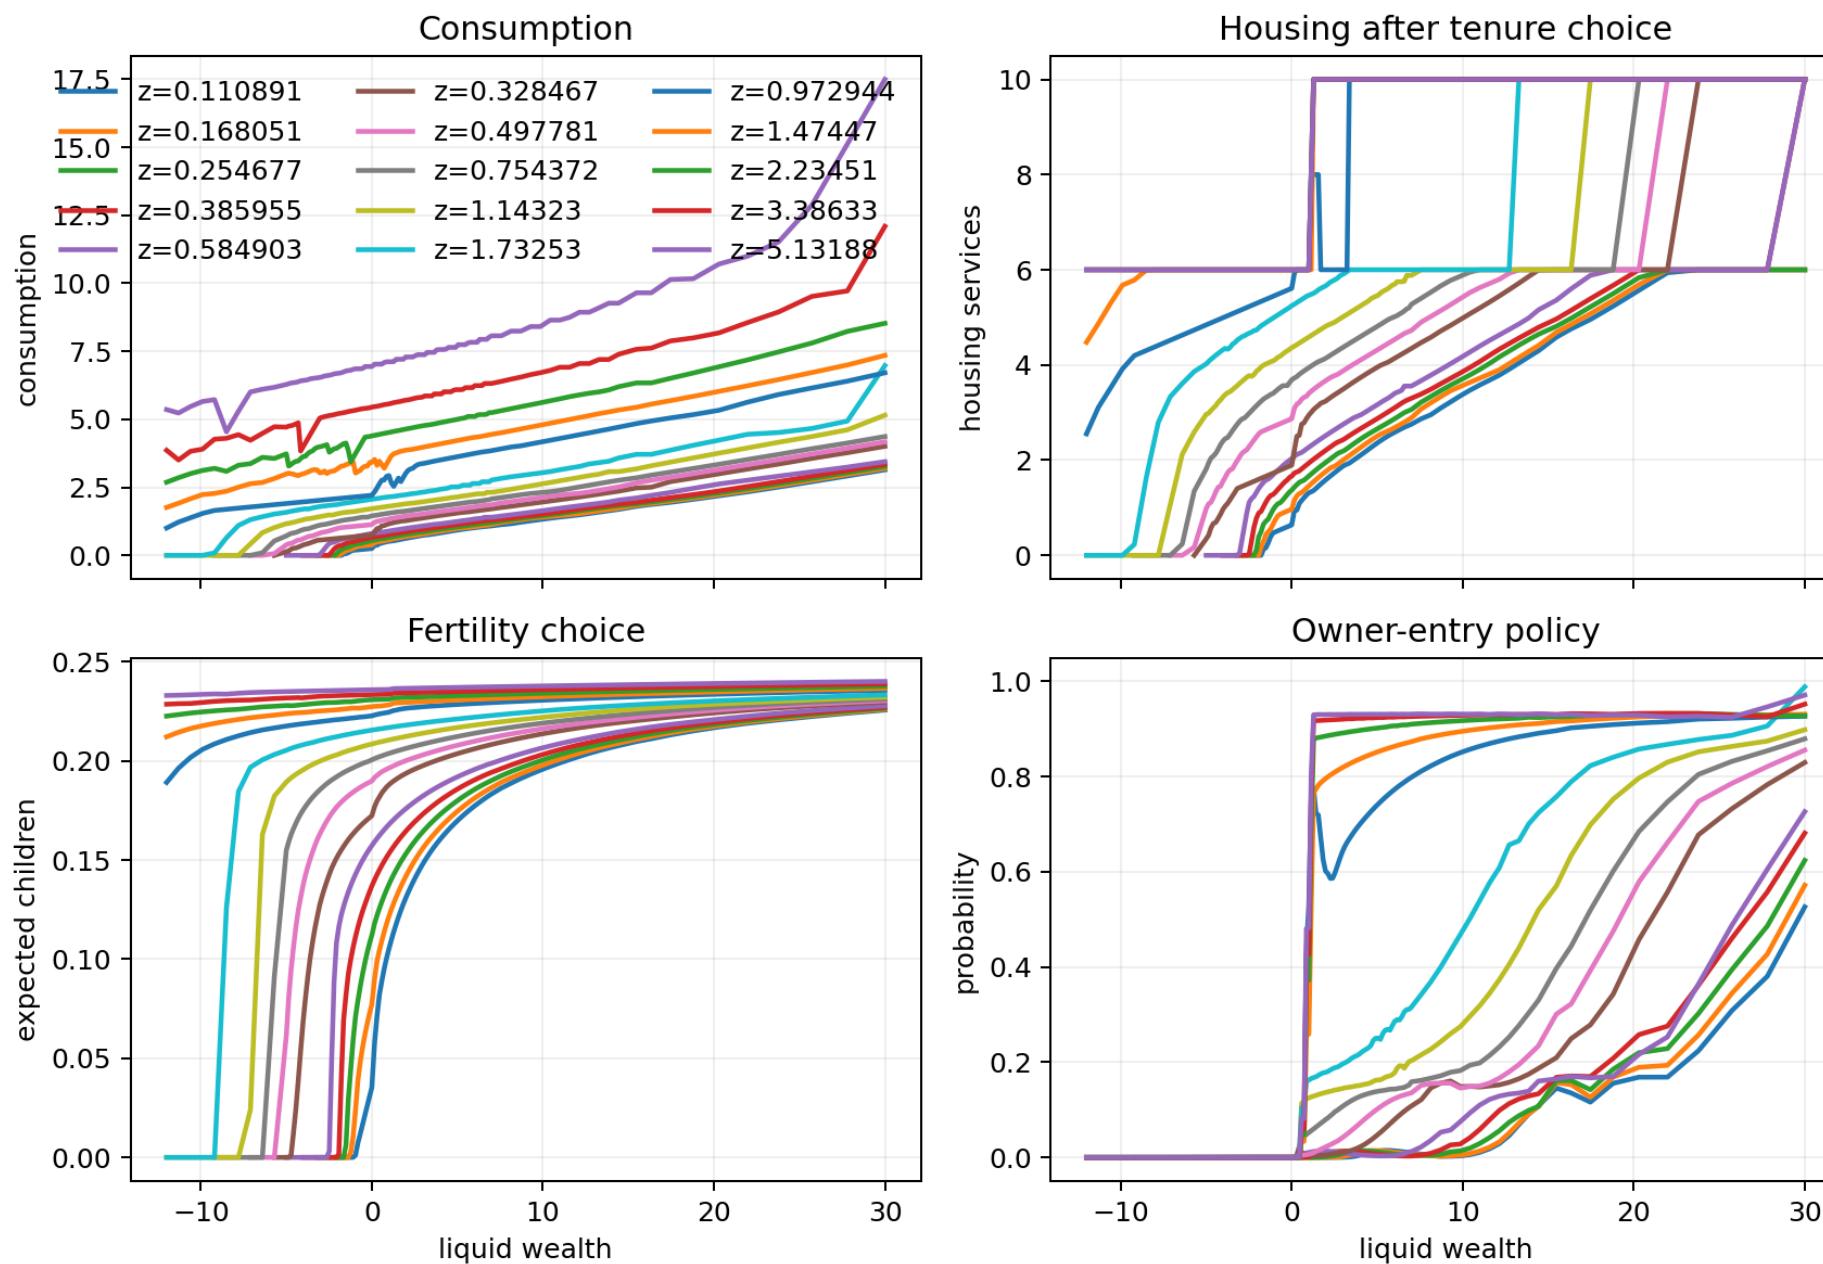

Same structural parameters and fixed fertility preference; separate stationary housing equilibria.
Pre-2007 diagnostic. A matched 2023 recalibration is a separate experiment.

3. 2023 policies: childless renter, age 30

2023 slice of the six-date transition; original saved diagnostic, unchanged.

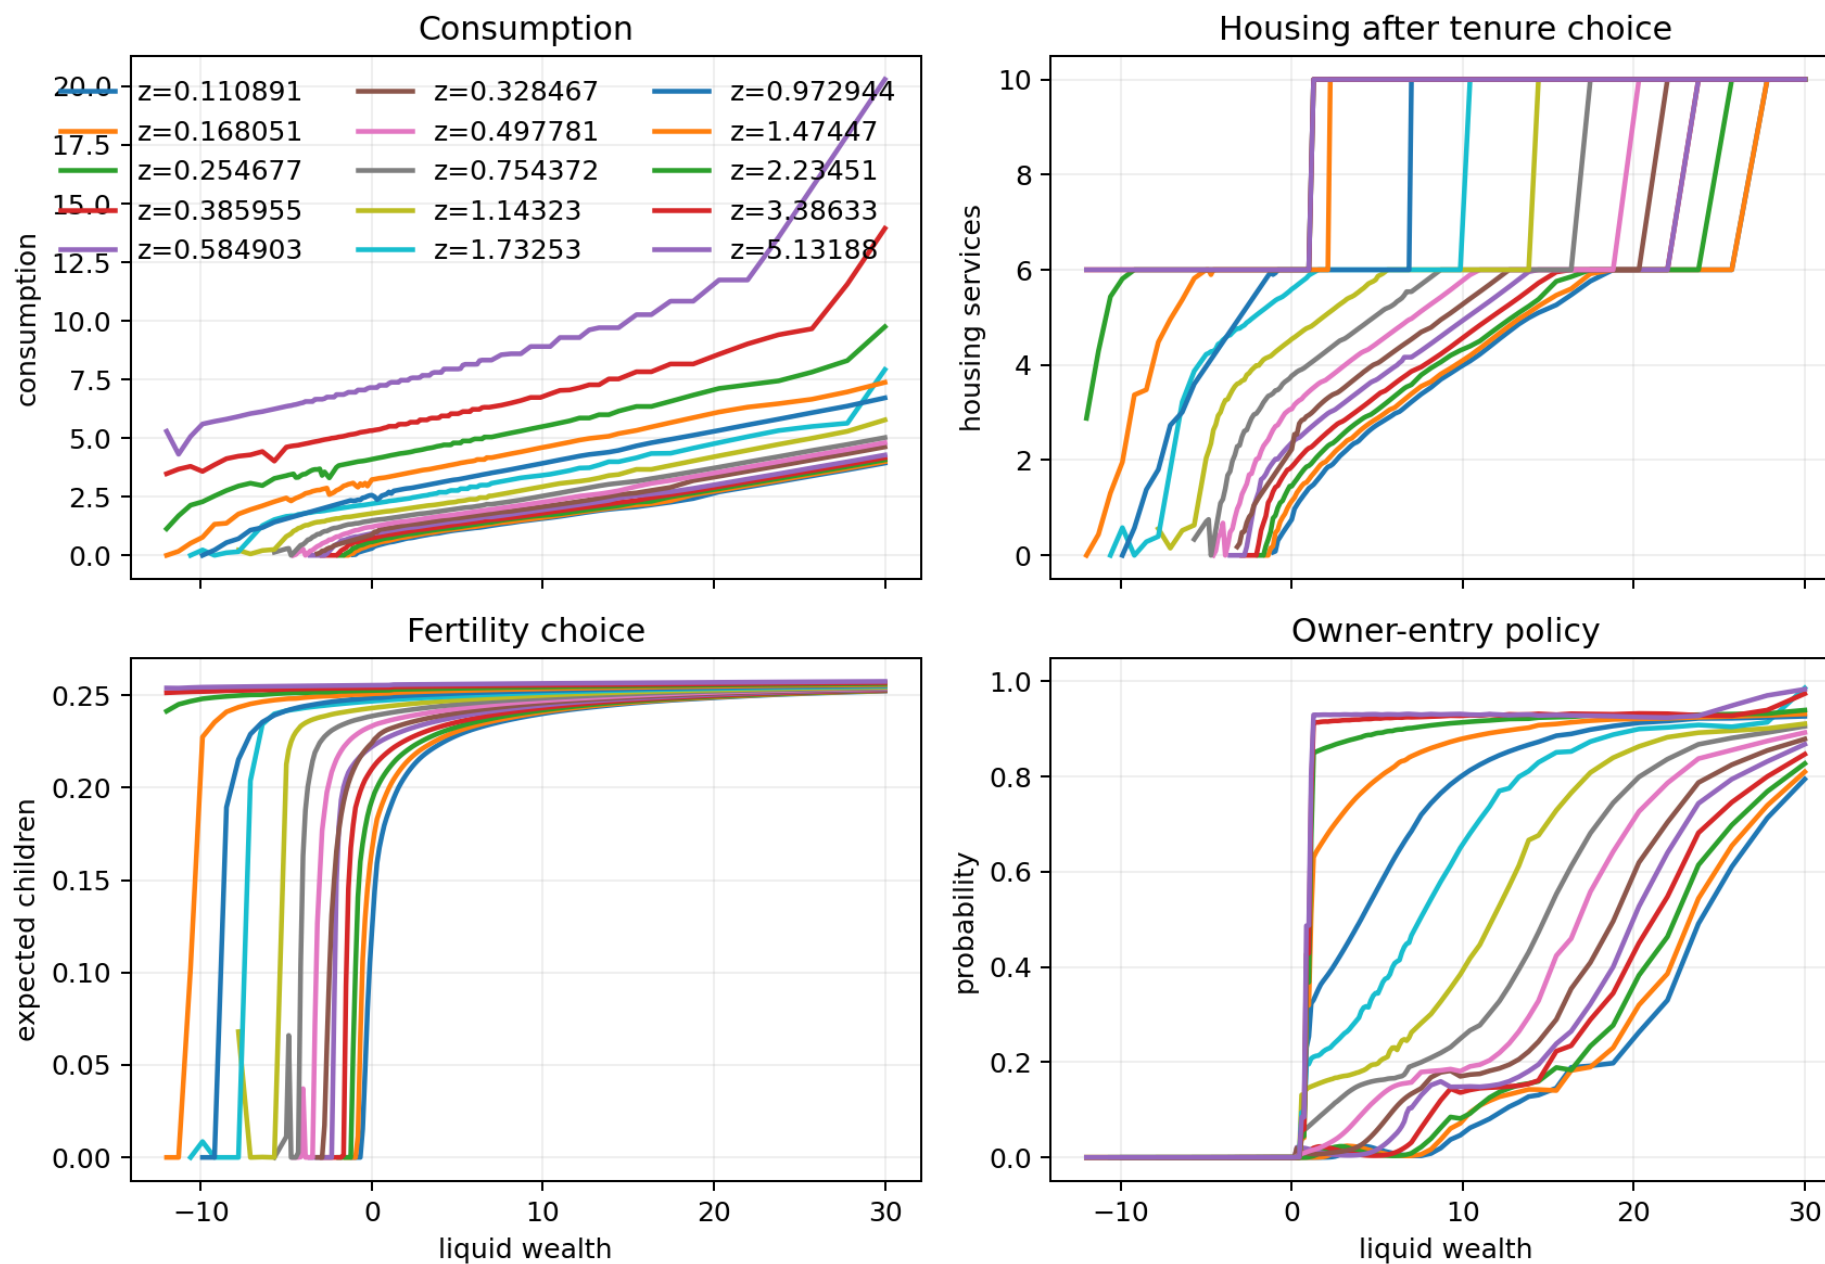

Childless renter policies at age 30

4. 2023 policies: childless renter, age 42

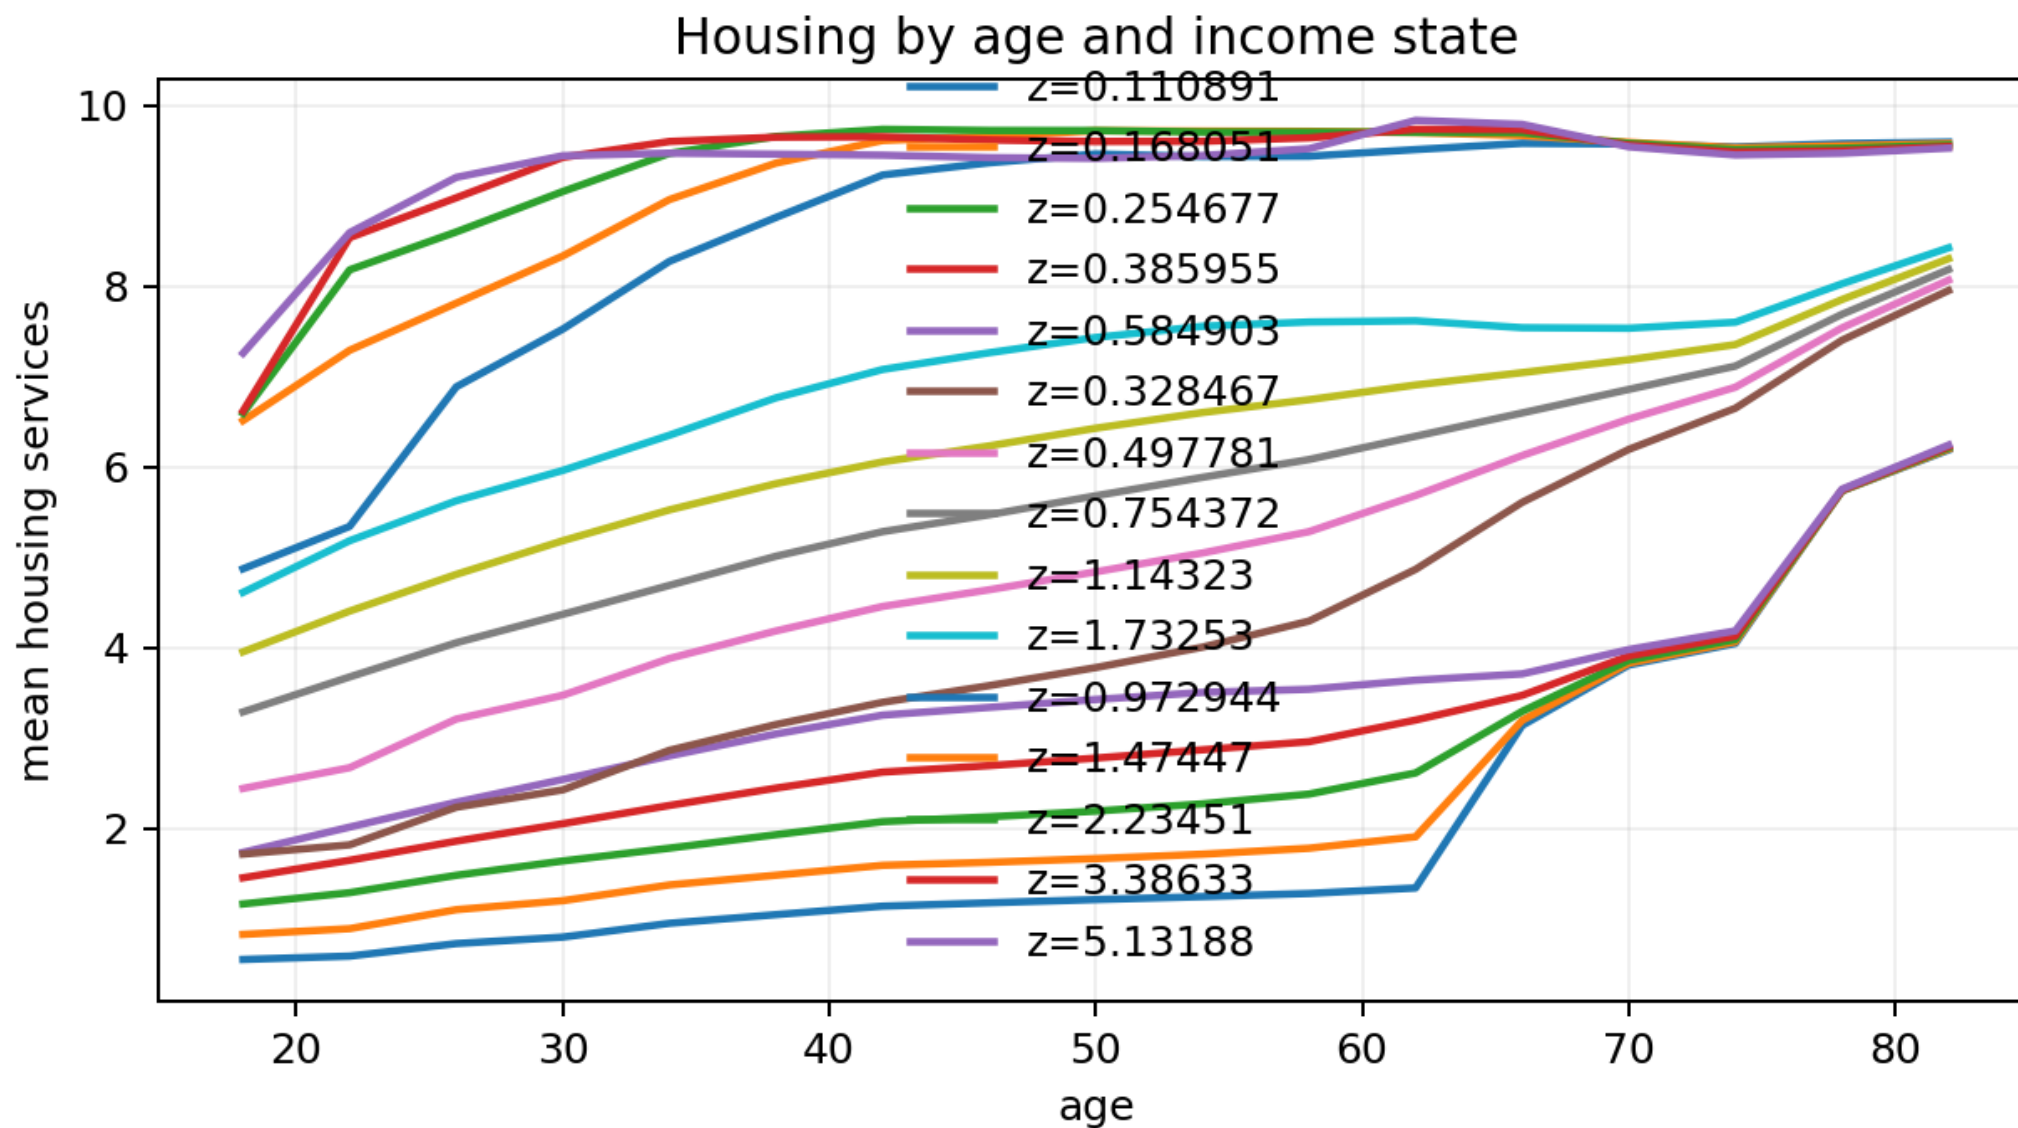

2023 slice of the six-date transition; original saved diagnostic, unchanged.

Childless renter policies at age 42

5. Housing across ages and income states

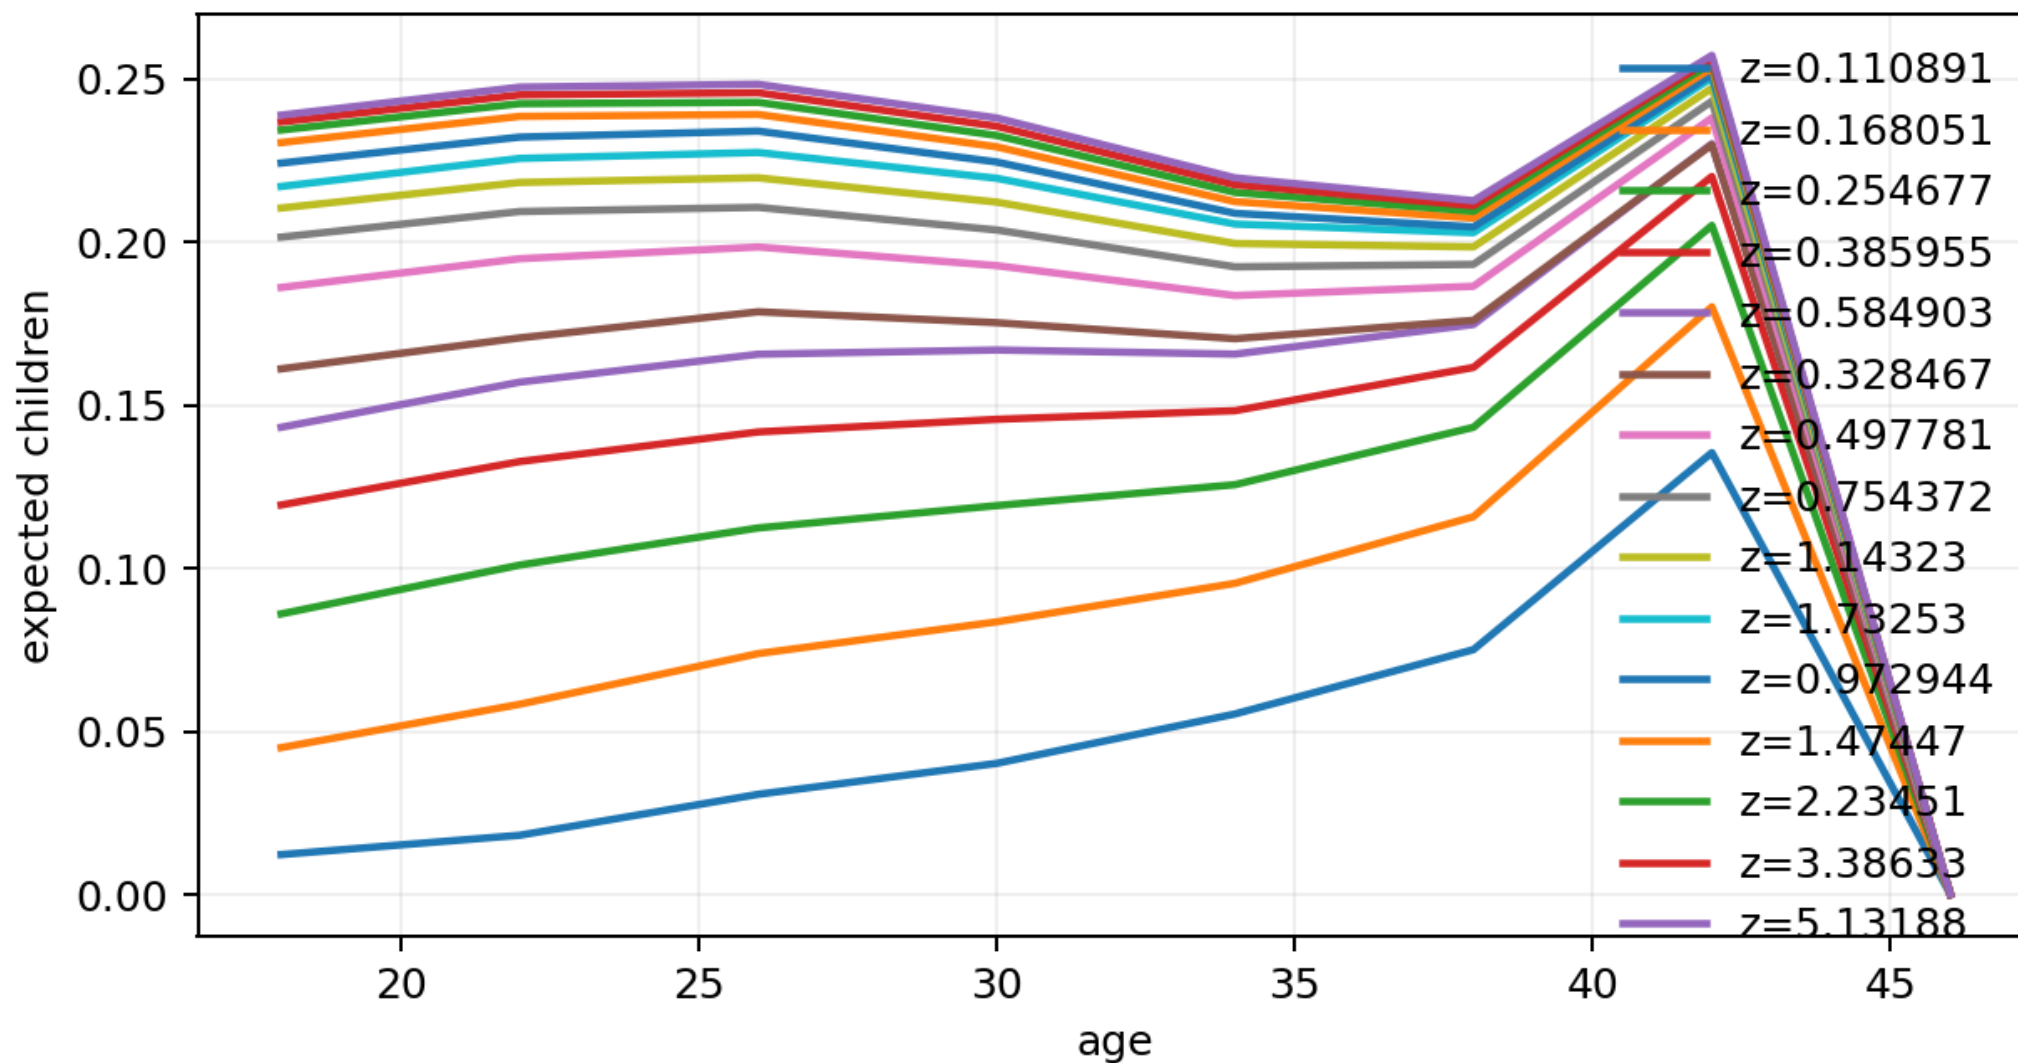

2023 slice of the six-date transition; original saved diagnostic, unchanged.

6. Fertility across ages and income states

2023 slice of the six-date transition; original saved diagnostic, unchanged.

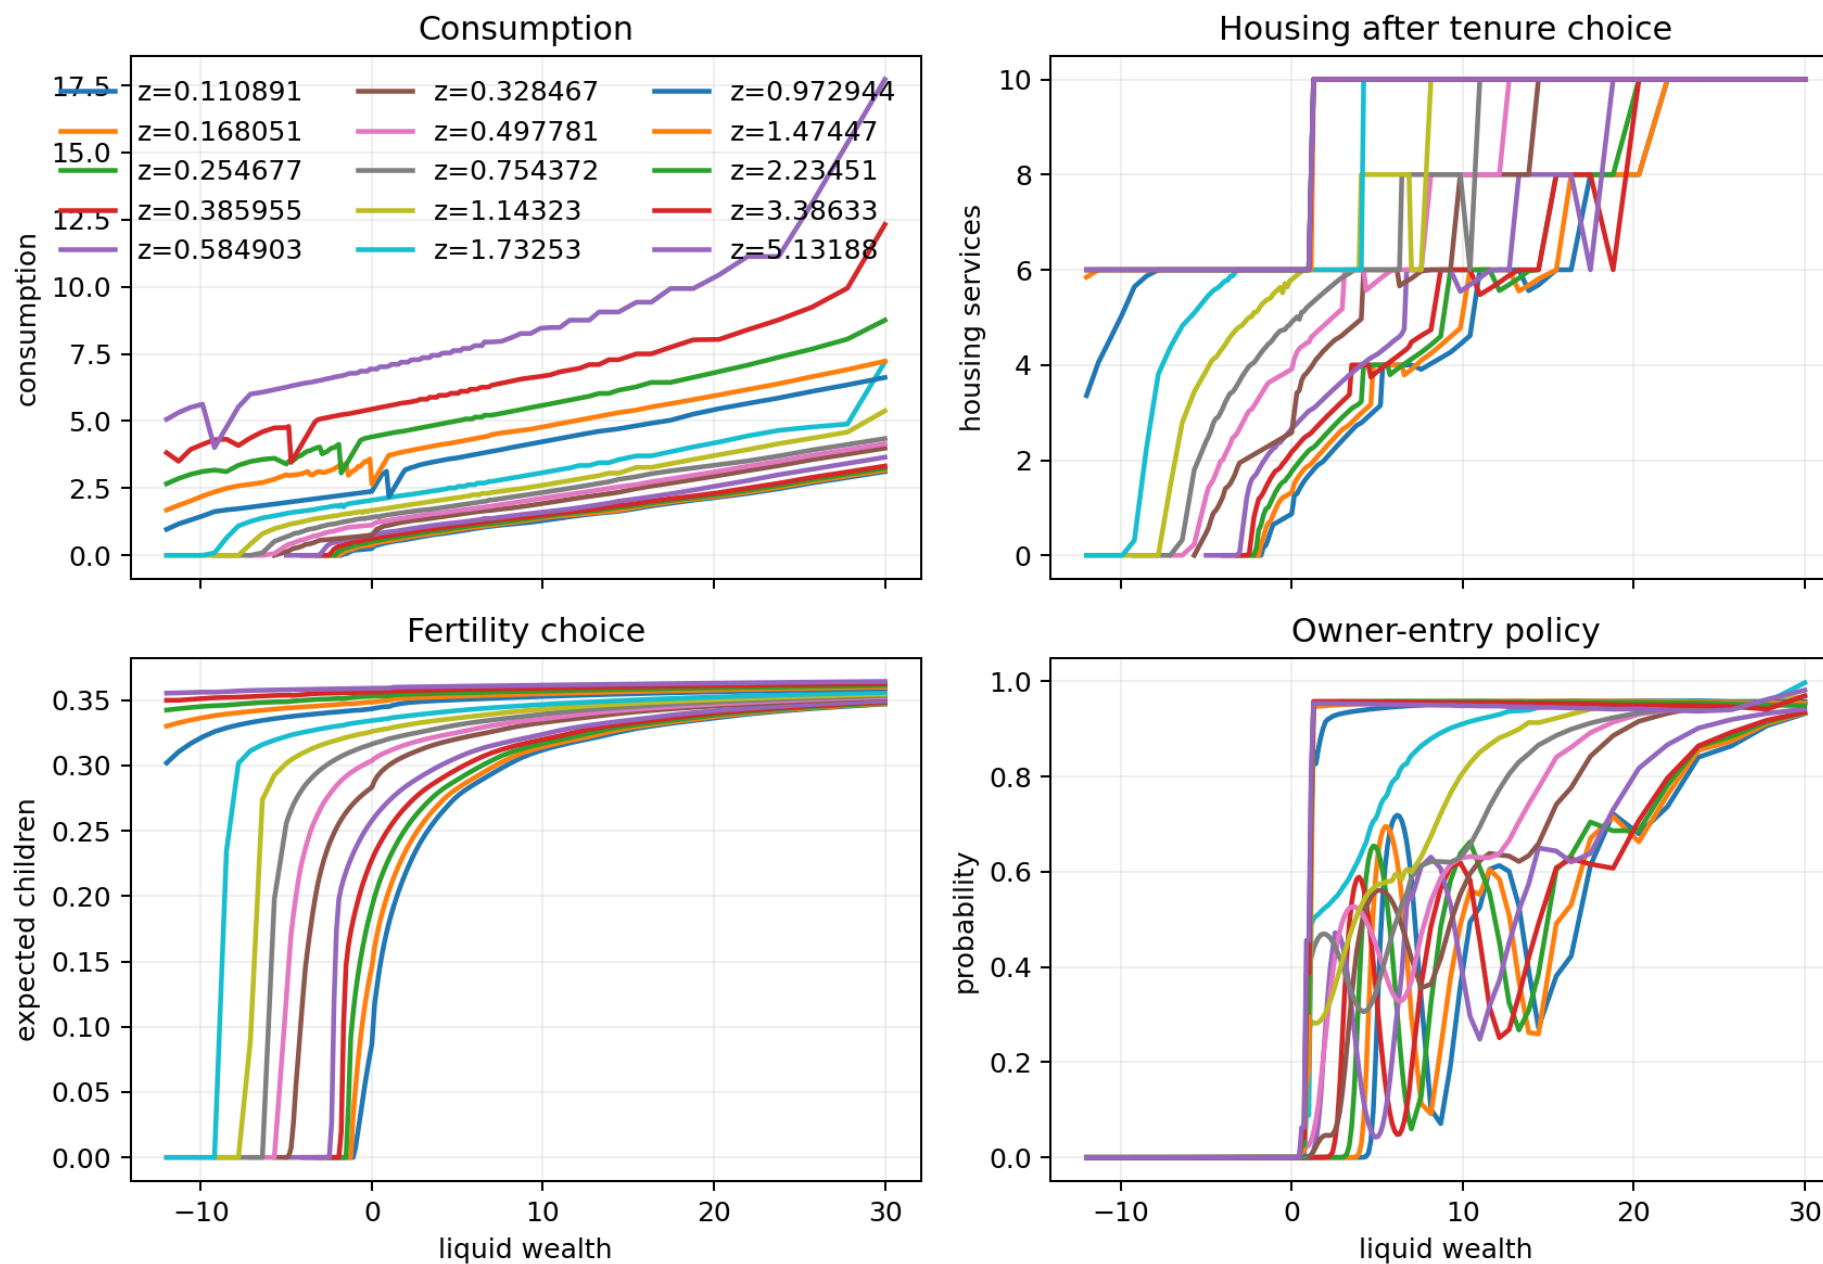

Fertility policy by age and income state

7. Fixed-parameter stationary policies: old utility

Pre-2007 stationary comparison; balanced pensions; original saved diagnostic, unchanged.

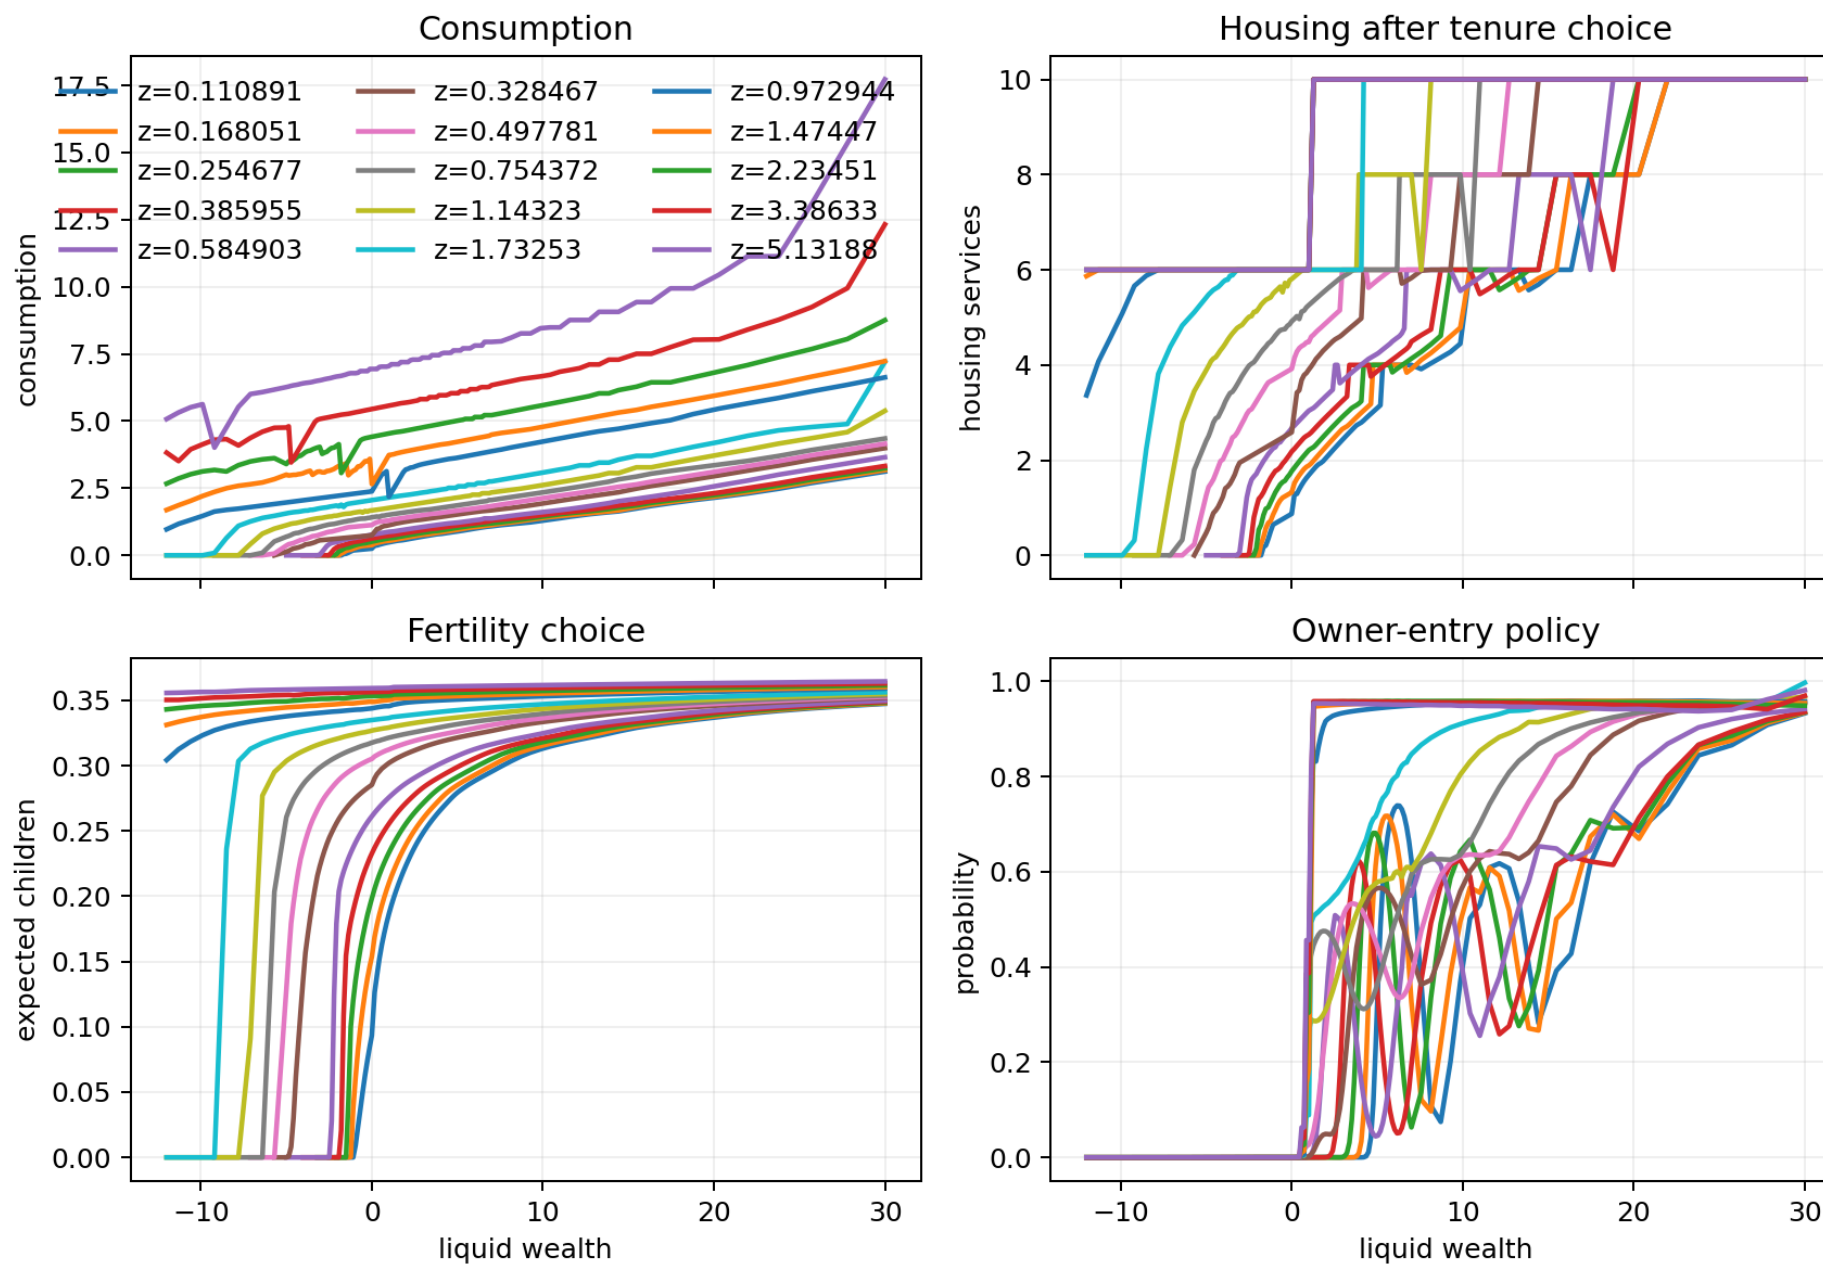

Childless renter policies at age 30

8. Fixed-parameter stationary policies: new utility

Pre-2007 stationary comparison; balanced pensions; original saved diagnostic, unchanged.

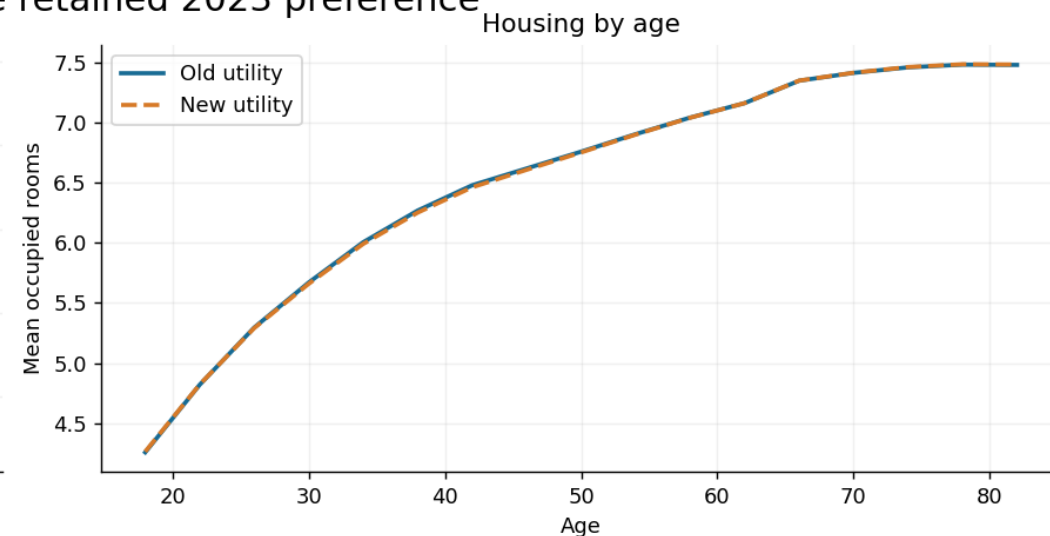

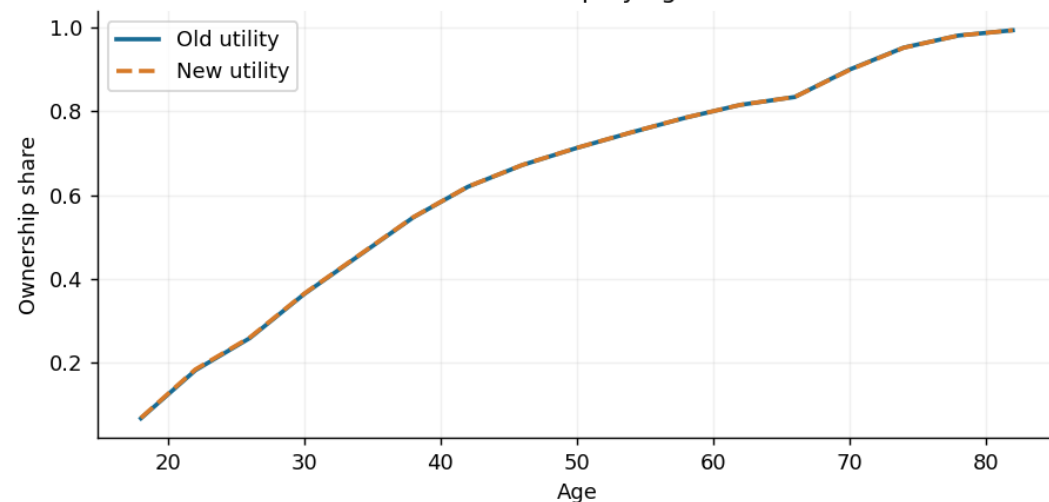

Childless renter policies at age 30

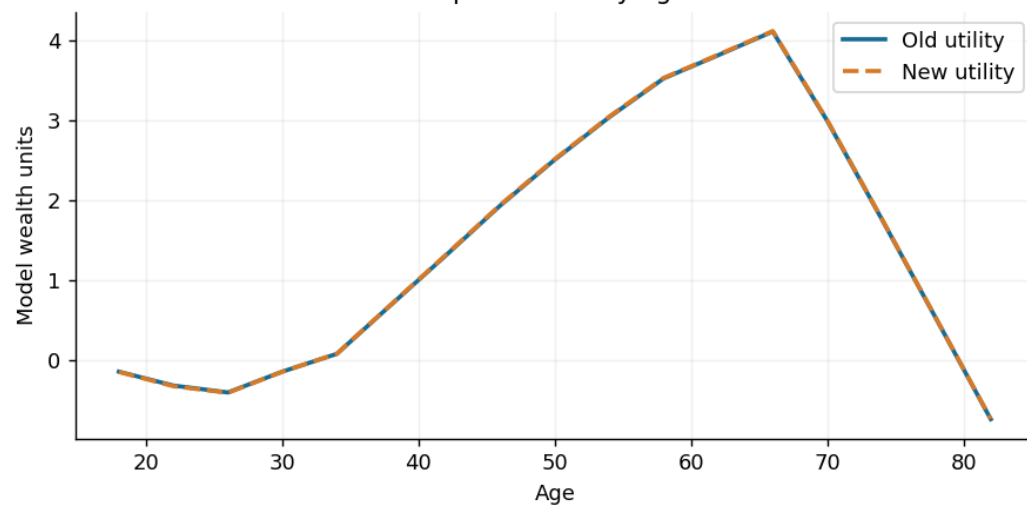

9. Stationary comparison at the retained 2023 preference

Both budgets balanced; unchanged structural parameters; no re-estimation or historical-population reproduction.

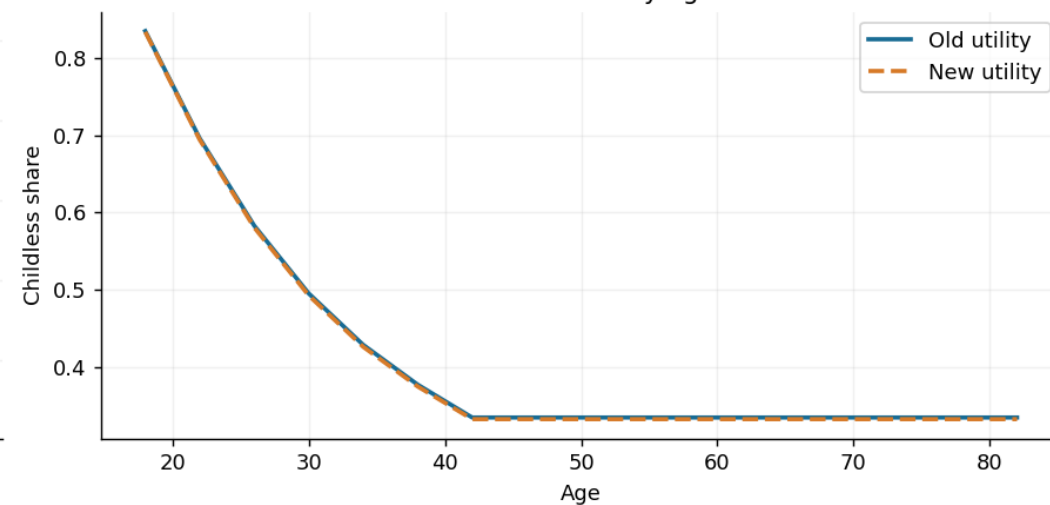

Old and new utility at the retained 2023 preference

Liquid wealth by age

Childlessness by age

Balanced pensions in both arms; same structural parameters and supply curve; two exact repetitions each.
Stationary counterparts, not recalibrated 2023 economies. They do not reproduce the historical 2023 population.
