

A. Outside option and entry

$$W_i^Y(q) = \bar{W}^E$$

$$\pi_i^E(q) = \frac{\exp\{W_i^Y(q)/\kappa_E\}}{\exp\{W_i^Y(q)/\kappa_E\} + \exp\{\bar{W}^E/\kappa_E\}}$$

B. Births as an area: entrants $\times$ fertility

$$dN = \bar{M} \int \pi_i^E dn_i dG_Y + \bar{M} \int n_i d\pi_i^E dG_Y$$
