

Fertility: historical fit and continuation

No property-tax rebate. Six-date forecasts; terminal-horizon sensitivity has not been verified.

2023 model: untargeted moment comparison

Moment	Data	Model 2023	Data vintage
Completed fertility, ages 40–44	1.92	1.70	CPS 2024
Childless, ages 40–44 (%)	18.8	25.0	CPS 2024
Exactly one child among mothers, 40–44 (%)	22.2	25.5	CPS 2024
Mean age at first birth (years)	28.09	29.74	NCHS 2023
First births at age 30+ (%)	37.7	44.0	NCHS 2023
Mean occupied rooms (capped at 9)	5.58	6.07	ACS 2023
Ownership, heads 30–55 (%)	58.7	46.9	ACS 2023
First-birth room response, −1 to +3	0.720	1.060	PSID pooled
Rooms: 3+ versus 1–2 resident children	0.355	0.266	ACS 2023
Recent-parent ownership gap (pp)	21.1	13.1	ACS 2023
Wealth / annual gross earnings	6.87	5.64	PSID 2005–19
Annual bequests / wealth (%)	0.88	0.70	External benchmark
Wealth/income p90 / median, ages 76–84	3.45	3.50	PSID 1984–2019

All 13 moment families from the initial calibration. CPS uses the nearest available fertility supplement; PSID moments are pooled. Completed fertility is children ever born at ages 40–44, distinct from period fertility. Birth timing uses model age-cell midpoints. Model first-birth rooms follow the 2019–2023 matched branch. Housing samples retain the original 42-metro definition.
