

Overnight utility comparison: shares linear

Selected weighted loss: 406.642. The complete fit has 13 rows, 12 positively weighted moments and 9 free structural coordinates. Psi is normalized to completed fertility 2.1.

Both independently executed repetitions match the original selected saved solution at zero tolerance. This verifies repetition; it does not establish identification, optimizer convergence or grid robustness.

The comparison uses a common experimental material-utility normalization at the fixed reference rent. The mild concavity exponent 0.86 is a fixed sensitivity, not an externally estimated fact.

The first-birth room response uses an unmatched PSID proxy. The model sums positive estates from all households; the SCF bequest target is child-directed. These measurement limitations remain in all arms.

The adopted pension-to-gross-working-earnings ratio sets baseline payroll tax from baseline demographics. Equal retiree pensions balance PAYGO; transitions are outside this comparison.

Entry wealth, estate recipients and mortality mapping remain inherited. Adult entry splits birth vintages equally at 16 and 20 years, with the division by 2.1 applied once.

Exact source values, targets, weights, restrictions, near-bound flags and file fingerprints remain in the accompanying CSV and JSON files.

Complete target fit

Moment	Target	Model	Gap	Weight	Loss
initial_normalization	2.100	2.100	7.275e-07

theta1	0.008				externally fixed B15

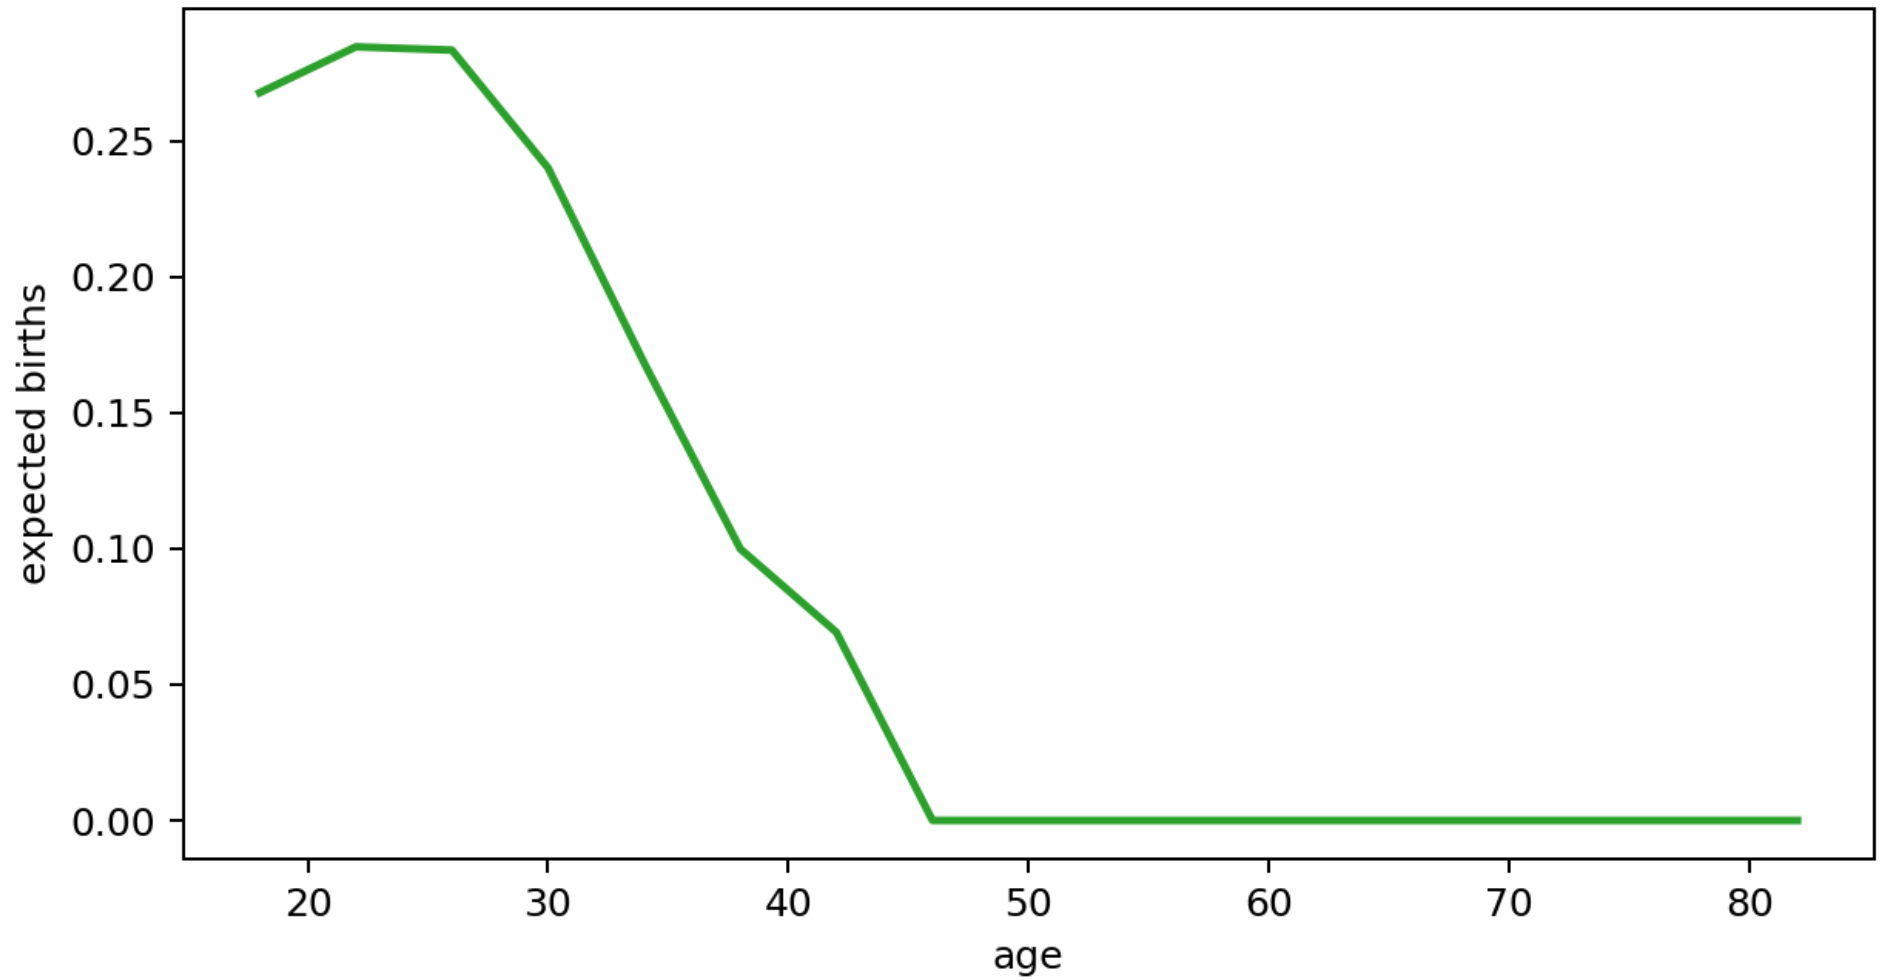

Parameters and restrictions (2/3)

Parameter	Estimate	Lower	Upper	Near bound	Status
psi_child	0.104				normalized to 2.1
payroll_tax	0.080				derived from adopted pension ratio and baseline demographics
pension_period	0.918				endogenous balanced PAYGO
housing_supply_elasticity	0.630				retained external setting
tenure_choice_kappa	0.005				retained external setting
alpha_cons	0.733				retained external setting
sigma	2.000				retained external setting
selling_cost	0.060				retained external setting
financed_share	0.800				retained external setting
annual_depreciation	0.014				author adopted input

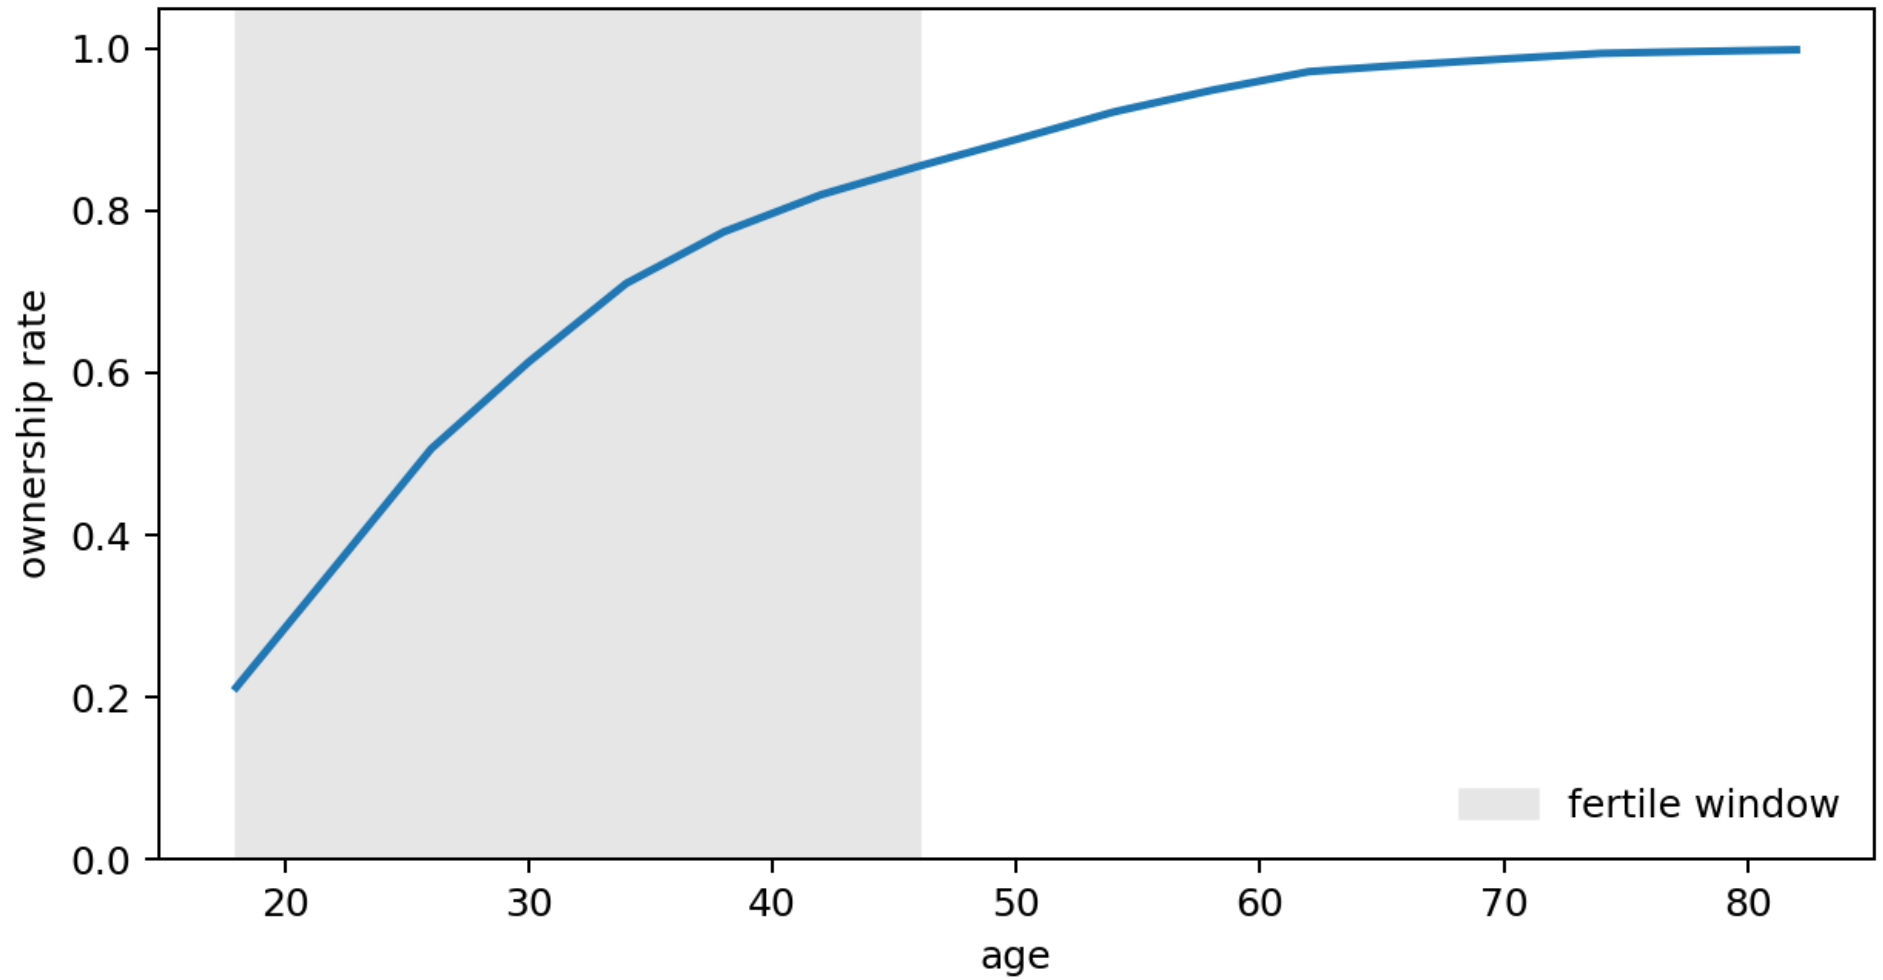

Parameters and restrictions (3/3)

Parameter	Estimate	Lower	Upper	Near bound	Status
period_depreciation	0.055				four-year compounded
annual_property_tax	0.011				author adopted input
period_property_tax	0.042				four-year linear source convention
income_process	15.000				retained B15 persistent-state count
entrant_conversion_factor	0.500				legacy child-departure diagnostic; inactive in split-birth entry
adult_entry_birth_to_household_conversion	0.476				effective closed stationary birth conversion
child_benefit_exponent	1.000				fixed sensitivity; not estimated
utility_reference_rent	0.110				fixed experimental common normalization
pension_to_gross_worker_earnings	0.229				adopted CPS2007 target
